Sept. 14, 2011 @ ECSA 2011, Essen, Germany

Context of this Work

Online Capacity Management for Increased Resource Efficiency

Introduction

The screenshot shows the CEWE website's homepage. It features a top navigation bar with links for Produkte, Interaktionen, Kultur, Pressecenter, Interaktiver Bildschirm, Kontakt, and Impressum. Below this is a main content area with several promotional banners:

- A large banner for "Disney-Shop" featuring Winnie Pooh, Tigger, and others.
- A banner for "CEWE COLOR für Foto-Motiv 2010" featuring a photo of three people.
- A banner for "Kinder" featuring a photo of two children.
- A banner for "Interaktiver Bildschirm" featuring a photo of a person at a kiosk.
- A banner for "Pressecenter" featuring a photo of a newspaper.
- A banner for "Foto- und Video-Workshop" featuring a photo of a person holding a camera.
- A banner for "Foto-Workshop 'Mensch & Natur'".

At the bottom, there is a footer with links for "Newsletter", "Anmelden", "Daten und Privacy", "Impressum", and "Netzpol".

The screenshot shows the CEWE TEL website's homepage. It features a top navigation bar with links for Produkte & Preise, Service & Hilfe, Regionale, and Kontakt. Below this is a main content area with several promotional banners:

- A large banner for "Kombinieren & sparen" featuring a yellow box labeled "Ihr DSL - Wunschknot" and a blue box labeled "Ihre Handy - Wunschknot".
- A banner for "Topknot: DSL € 8,99" featuring a photo of a computer monitor.
- A banner for "Servicempfehlungen" featuring a photo of a smartphone.
- A banner for "Mobile Welt" featuring a photo of a red mobile phone.
- A banner for "Kontakt & sparen" featuring a photo of a white router.

At the bottom, there is a footer with links for "Newsletter", "Anmelden", "Daten und Privacy", "Impressum", and "Netzpol".

Online Capacity Management for Increased Resource Efficiency

Introduction

The screenshot shows the homepage of the CEWE website. It features a top navigation bar with links for Produkte, Interaktionen, Kultur, Pressecenter, Interaktiver Bildschirm, Kontakt, and Impressum. Below this is a main content area with a large image of a girl and several smaller product thumbnails. A sidebar on the left contains sections for Produkte (with a lightbulb icon), Kultur (with a family icon), and Pressecenter (with a person icon). At the bottom, there's a section for "Foto 2010 Fotowettbewerb" featuring a "Mensch" category.

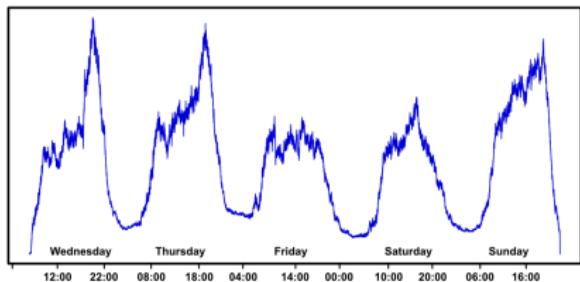

The screenshot shows the homepage of the EWE TEL website. It has a top navigation bar with links for Produkte & Preise, Service & Hilfe, Regionale, and Kontakt. The main content area features a large graphic with two overlapping shapes: one yellow labeled "Ihr DSL-Wunschknot" and one blue labeled "Ihre Handy-Wunschknot". Below this are sections for "Topknot: DSL € 8,99", "Servicempfehlungen", "Mobile Mitti", and "Kombinieren & sparen". The "Kombinieren & sparen" section includes a red button for "Zum Kombi-Test!". At the bottom, there's a newsletter sign-up form.

- Business-critical software systems
- Quality of service (**performance**, availability, . . .)
- Varying workloads + static capacity management

Context of this Work

Online Capacity Management for Increased Resource Efficiency

Introduction

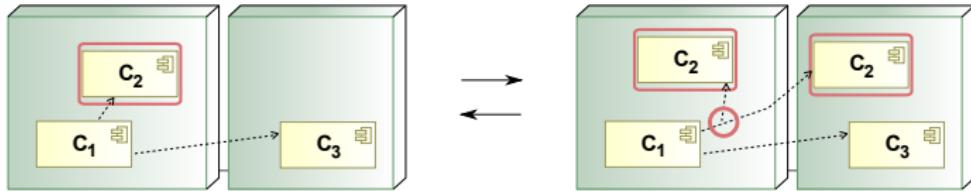

Problem: Overprovisioning — unnecessarily high operating costs

Underutilized resources during medium/low workload periods

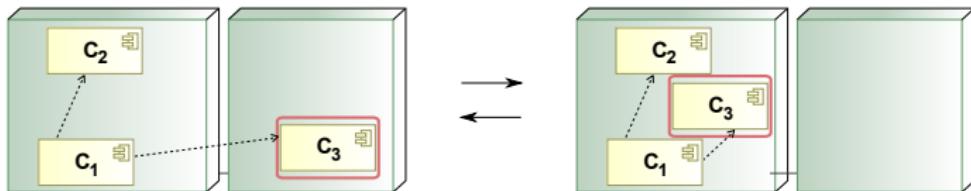

Goal: Increase resource efficiency while meeting SLAs

▷ **SLAastic** [vHRGH09, vH11]: Online capacity management employing runtime reconfiguration

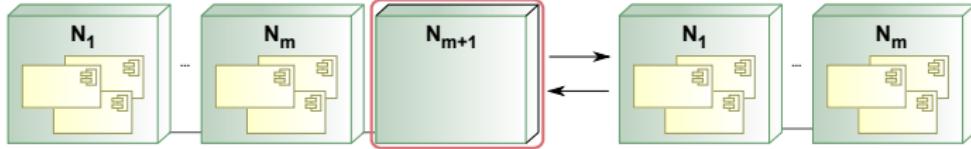

① (De-)Replication of Software Components

② Migration of Software Components

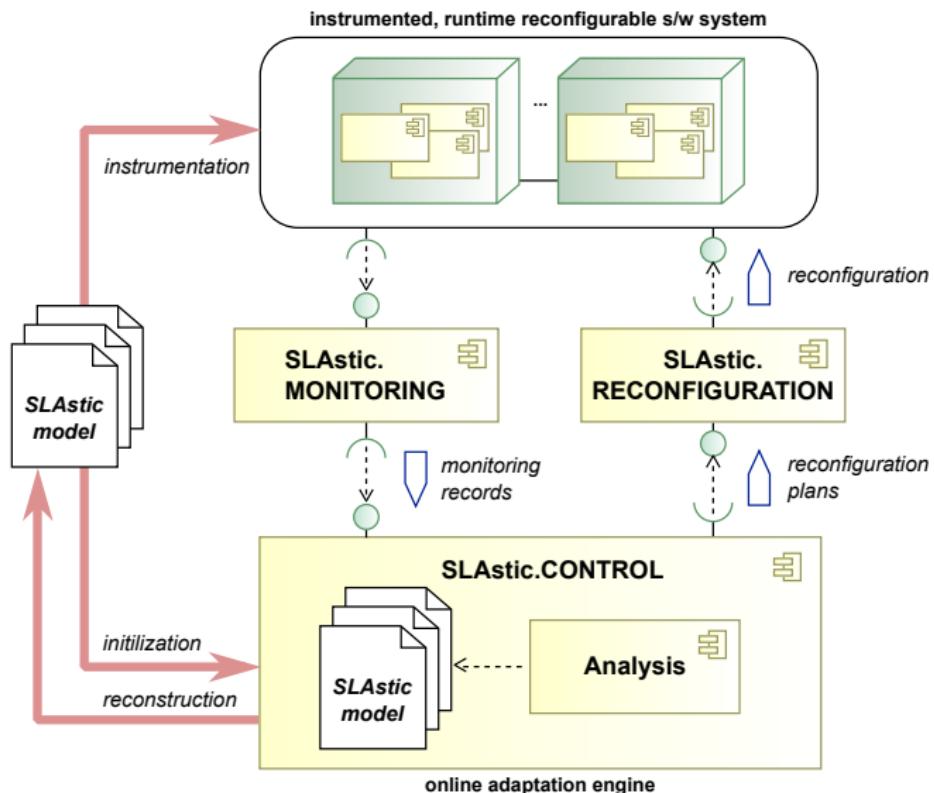

③ (De-)Allocation of Execution Containers

- 1 Introduction
- 2 SLAStic — Framework & PCM-Specific Reconfiguration
- 3 SLAStic.SIM — Simulator Architecture & Framework Integration
- 4 Evaluation
- 5 Conclusions

Online Capacity Management Framework

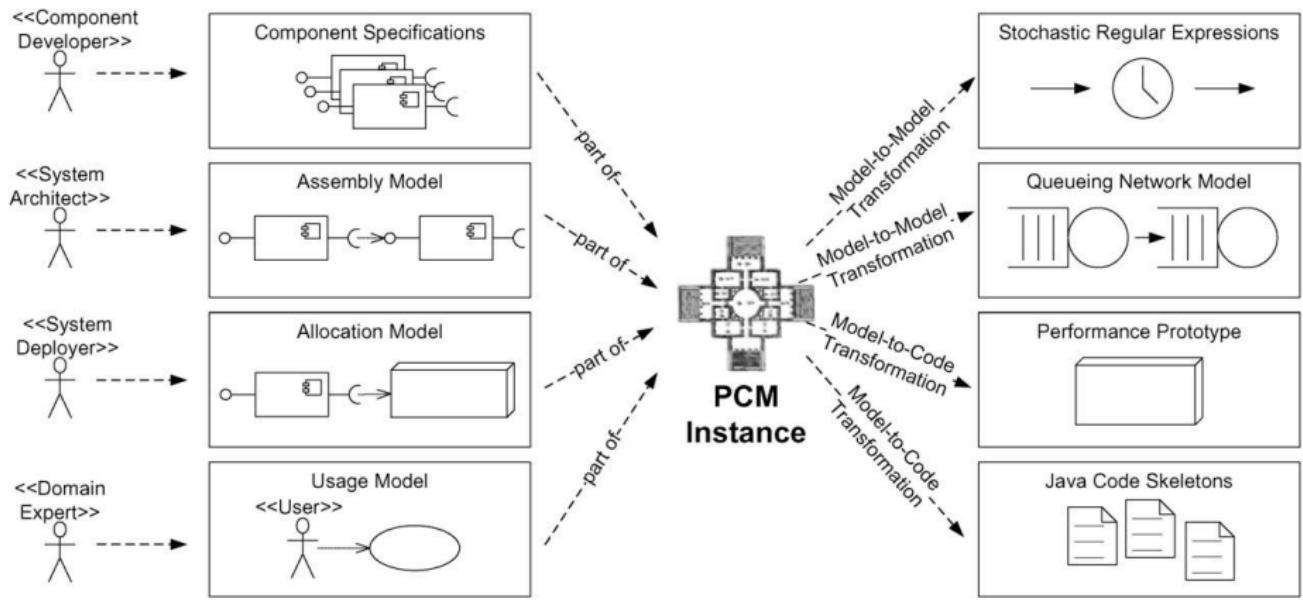

SLAStic — Framework & PCM-Specific Reconfiguration

Palladio Component Model (PCM)

[BKR09, RBH⁺07]

SLAastic — Framework & PCM-Specific Reconfiguration

[BKR09]

Bookstore Application — PCM Instance

Example PCM Instance Used in Our Evaluation

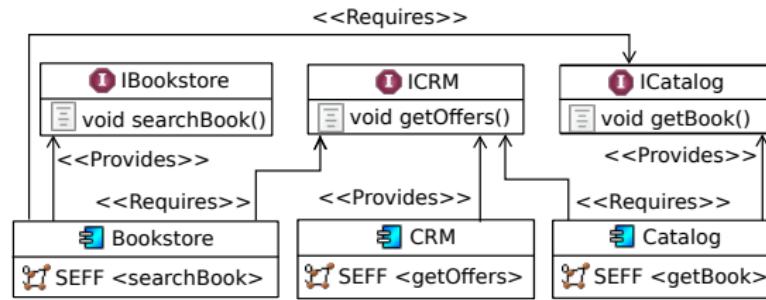

SLAastic — Framework & PCM-Specific Reconfiguration

① PCM Repository Model

- Components & Interfaces
- RDSEFFS

② PCM System Model, Resource Env. & Allocation

③ Scenario searchBook()

Bookstore Application — PCM Instance

Example PCM Instance Used in Our Evaluation

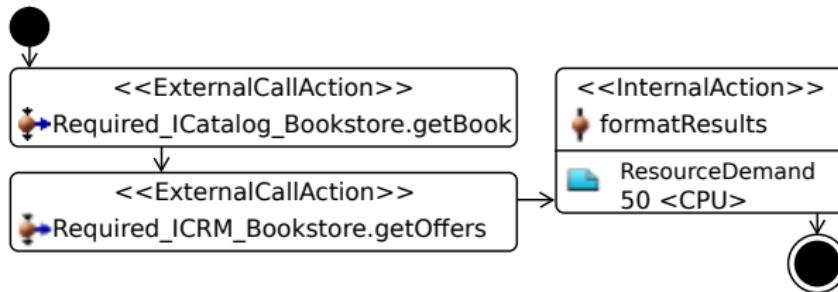

SLAastic — Framework & PCM-Specific Reconfiguration

1 PCM Repository Model

- Components & Interfaces
- RDSEFFS

2 PCM System Model, Resource Env. & Allocation

3 Scenario searchBook()

RDSEFF of `Bookstore.searchBook()`

- `Bookstore.searchBook()`: External calls: `getBook()` & `getOffers()`; CPU demand: 50
- `Catalog.getBook()`: External call: `getBook()`; CPU demand: 20
- `CRM.getOffers()`: CPU demand: 15

Bookstore Application — PCM Instance

Example PCM Instance Used in Our Evaluation

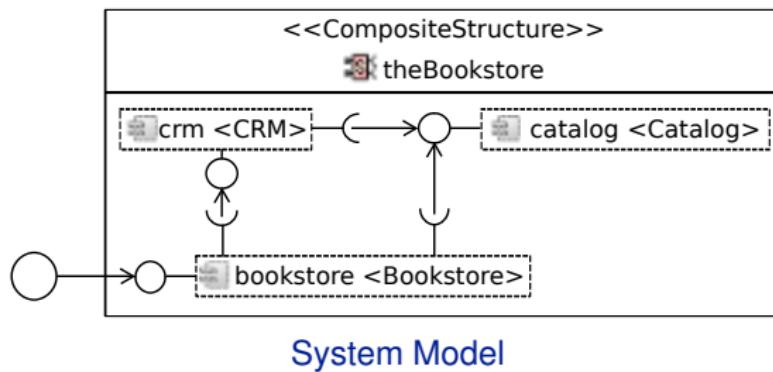

SLAastic — Framework & PCM-Specific Reconfiguration

① PCM Repository Model

- Components & Interfaces
- RDSEFFS

② PCM System Model, Resource Env. & Allocation

③ Scenario searchBook()

- **Resource Environment:** 2 resource containers (`Server1` & `Server2`)
- **(Initial) Allocation:** 1 allocation ctx. per assembly ctx. on `Server2`; `Server1` empty

Bookstore Application — PCM Instance

Example PCM Instance Used in Our Evaluation

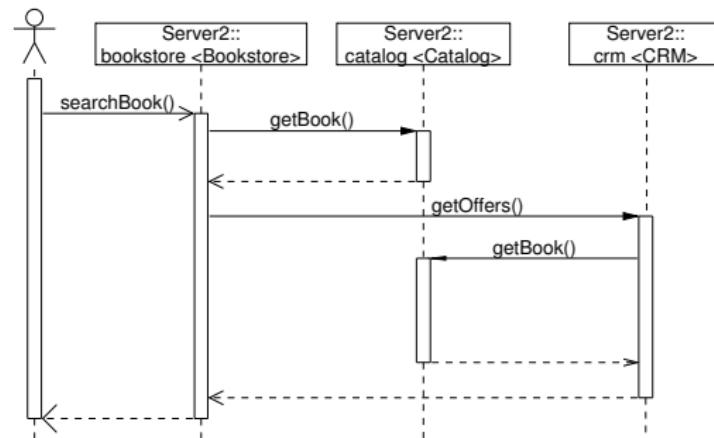

SLAastic — Framework & PCM-Specific Reconfiguration

① PCM Repository Model

- Components & Interfaces
- RDSEFFS

② PCM System Model, Resource Env. & Allocation

③ Scenario searchBook()

(reconstructed from simulation data)

Reconfiguration Operations (SLAastic/PCM)

SLAastic — Framework & PCM-Specific Reconfiguration

Christian-Albrechts-Universität zu Kiel

Architecture Level Operation Signatures (based on SLAastic Meta-Model):

1 (De-)Replication of Software Components

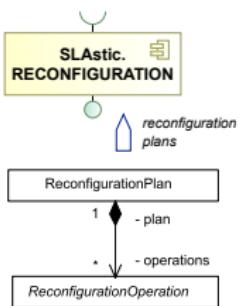

- replicate (component: `AssemblyComponent`, to: `ExecutionContainer`)
- derePLICATE (component: `DeploymentComponent`)

2 Migration of Software Components

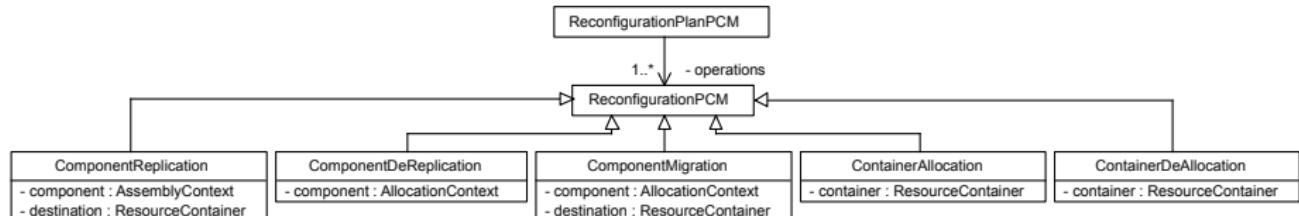

- migrate (component: `DeploymentComponent`, to: `ExecutionContainer`)

3 (De-)Allocation of Execution Containers

- allocate (containerType: `ExecutionContainerType`)
- deallocate (container: `ExecutionContainer`)

Technology-specific Operation Signatures (here: PCM [BKR09]):

Rationale: Simulation-based . . .

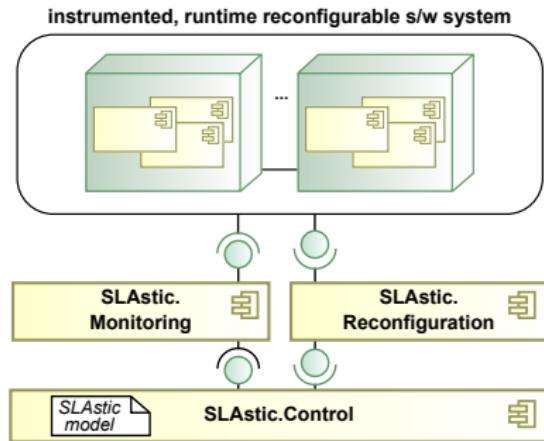

- ① Study (transient & stationary) effects of reconfigurations (implementation “costly”)
- ② Online performance prediction (e.g., proactive problem detection, online planning)
- ③ Offline performance prediction (e.g., evaluation of adaptation strategies/techniques)
- ④ Evaluation of overall approach (in addition to lab & case studies)

Our Requirements for a Performance Simulator:

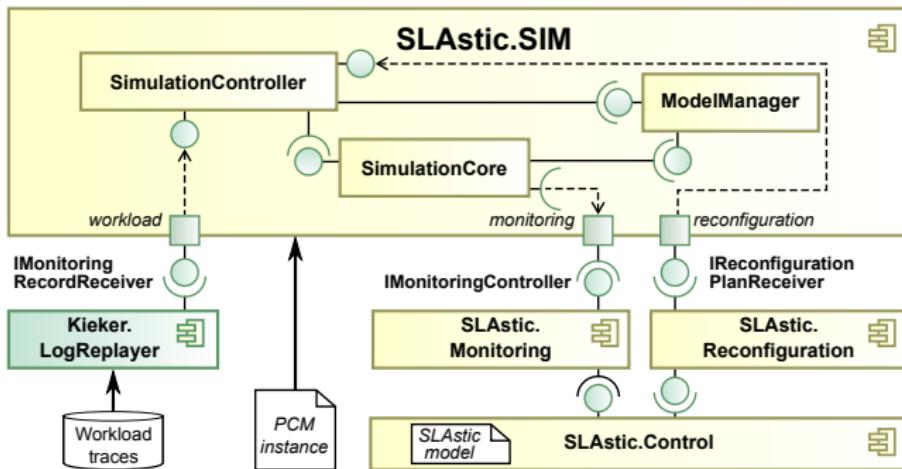

- ① Architectural style: C-B software systems (assembly, deployment, . . .)
- ② Workload: Replay traces, support varying workload
- ③ Runtime reconfiguration: Support SLAstic operations
- ④ Measures: Performance (timing, CPU utilization)

Agenda

- 1 Introduction
- 2 SLAastic — Framework & PCM-Specific Reconfiguration
- 3 SLAastic.SIM — Simulator Architecture & Framework Integration
- 4 Evaluation
- 5 Conclusions

SLAStic.SIM — Architecture & Integration

- (Initial) transformation of PCM instance into internal representation
- SLAStic.SIM employs Desmo-J¹ [PK05] discrete-event simulation engine
- Kieker used for providing workload traces and for monitoring simulation data
- Probes injected with Google Guice²

¹<http://desmoj.sourceforge.net/> ²<http://code.google.com/p/google-guice/>

- Workload
 - Driven by externally provided workload events (e.g., replayed monitoring logs)
 - Allows *integration with workload generators*
- Reconfiguration
 - Triggered by externally provided PCM-specific reconfiguration plans
 - Supports the presented operations
- Hardware resource scheduling
 - CPU: Processor-sharing (time slicing)
 - Disk: First-come/first-served
 - *Scheduler interface allows custom disciplines*
- Measurements
 - Executions (incl. timing & control-flow information)
 - CPU utilization
 - # Concurrent (system-level) transactions
- Unsupported PCM features:
 - (Parametric) stochastic expressions → *planned*
 - Middleware model (as supported by SimuCom)

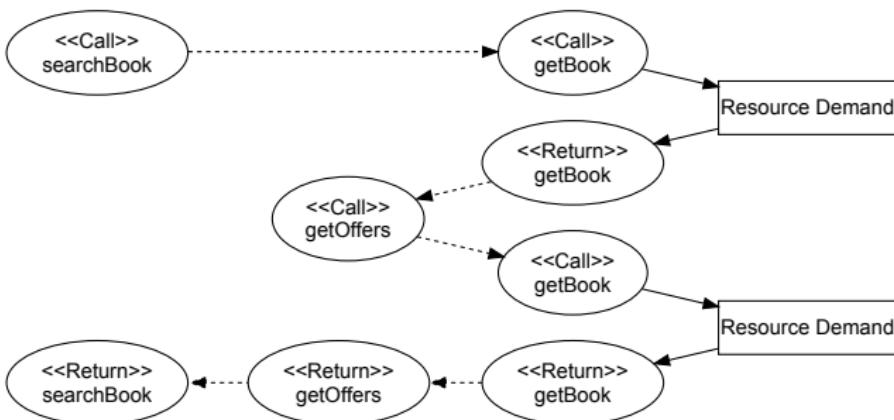

Initialization of the dynamic simulation model

- ① store Components and their Services for lookup
- ② initialize AssemblyContexts (i. e. component instantiation)
- ③ initialize ResourceContainers (CPUs, schedulers, ...)
- ④ initialize AllocationContexts and deallocate remaining ResourceContainers

On occurrence of an entry level system call

- ① the corresponding RDSEFF is looked up
- ② the control flow is evaluated (i. e. the AbstractActions) and translated into simulatable events
- ③ the first event is scheduled

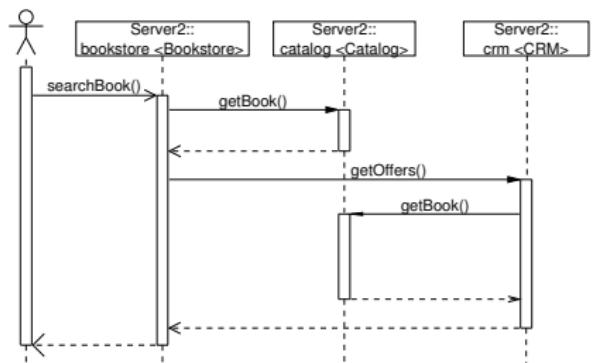

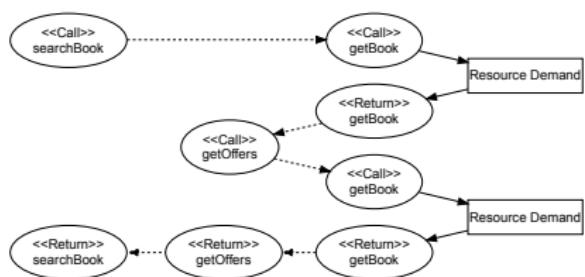

Initialization & Runtime Phase

On occurrence of an entry level system call

- ① the corresponding RDSEFF is looked up
- ② the control flow is evaluated (i. e. the AbstractActions) and translated into simulatable events
- ③ the first event is scheduled

Control Flow Events and Sequence Diagram

- 1 Introduction
- 2 SLAStic — Framework & PCM-Specific Reconfiguration
- 3 SLAStic.SIM — Simulator Architecture & Framework Integration
- 4 Evaluation
 - Goals & Methodology
 - Scenario 2 (Varying Workload w/o Reconfiguration)
 - Scenario 3 (Varying Workload w/ Reconfiguration)
- 5 Conclusions

Goals

- Evaluating SLAStic.SIM's performance
- Comparison with SimuCom (performance & results)
- Evaluating effect of reconfiguration on the simulated system

Methodology

- Use of Bookstore sample application (*PCM instance described in the beginning*)
- **Evaluation scenarios:**
 - ① Constant workload, comparison with SimuCom [*results in the paper*]
 - ② Varying workload intensity w/o reconfiguration
 - ③ Varying workload intensity w/ reconfiguration

Hardware and Software Setup

CPU	Intel Core i5, hyper-threading enabled
RAM	4 GB
OS	Ubuntu Generic Linux kernel 2.6.32-22 SMP
Java	Sun Java Version 1.6.0_20
Heap space	1 GB for SLAStic.SIM / 2 GB for SimuCom 3.0

Setup

- Workload generated (offline) by Apache JMeter² + own plug-in³
- Varying inter-arrival times according to an input function
- 68 653 traces
- Simulation time: 360 time units

²<http://jakarta.apache.org/jmeter/> ³<http://code.google.com/p/delayfunction/>

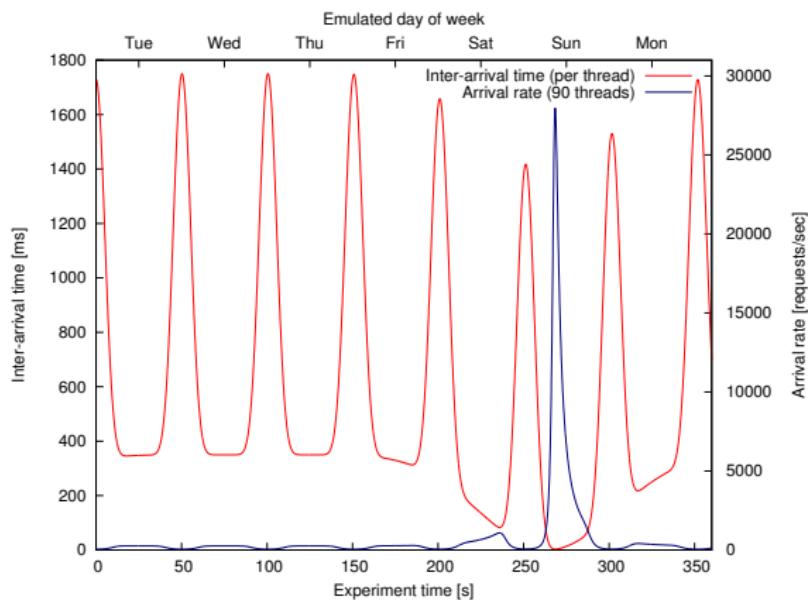

Simulation of Varying/Bursty Workload (Scenario 2)

Evaluation > Scenario 2 (Varying Workload w/o Reconfiguration)

Christian-Albrechts-Universität zu Kiel

Setup

Varying workload intensity (Scenarios 2 & 3)

Setup

- Workload generated (offline) by Apache JMeter² + own plug-in³
- Varying inter-arrival times according to an input function
- 68 653 traces
- Simulation time: 360 time units

Goal

- Demonstrating the performance simulation driven by bursty workload

Results

- Simulation took around 18.6 seconds
- Peak in input workload resulted in peaks of both, response times & CPU utilization

²<http://jakarta.apache.org/jmeter/>

³<http://code.google.com/p/delayfunction/>

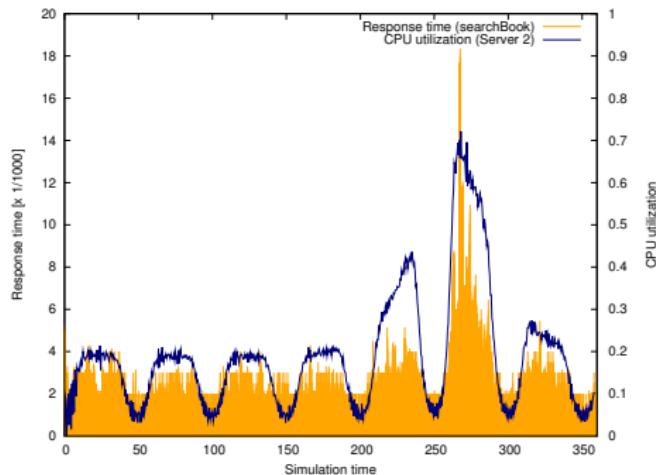

Simulation of Varying/Bursty Workload (Scenario 2)

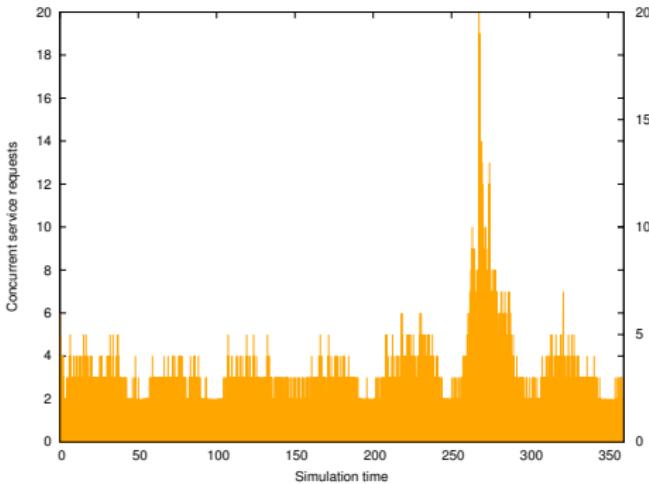

Evaluation > Scenario 2 (Varying Workload w/o Reconfiguration)

Christian-Albrechts-Universität zu Kiel

Results (cont'd)

Response times (searchBook) & CPU utilization

Concurrent transactions

Setup

- Reused varying workload from Scenario 2
- Simulation time: 360 time units
- **Reconfigurations** at $t = 200$ and $t = 300$
 - $t = 200$: Increase capacity ("weekend plan")
 - ① Allocation of Server1
 - ② Replicating CRM to Server1
 - ③ Migrating Catalog from Server2 to Server1
 - $t = 300$: Decrease capacity (inverse plan)
 - ① De-replication of CRM from Server1
 - ② Migration of Catalog from Server1 to Server2
 - ③ De-allocation of Server1

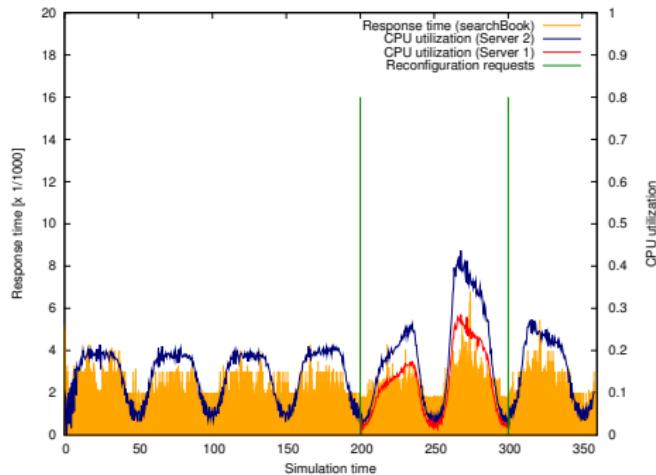

Goal

- Demonstrating the effect of reconfiguration

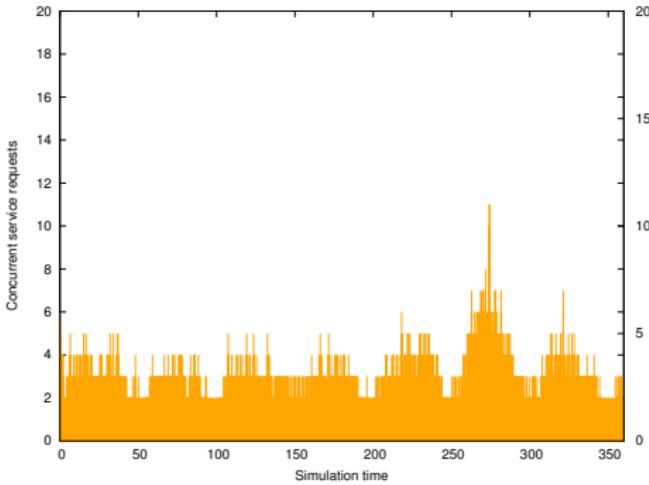

Results

- Simulation took around 18.1 seconds
- Reconfiguring the system lowered the peaks

Results (cont'd)

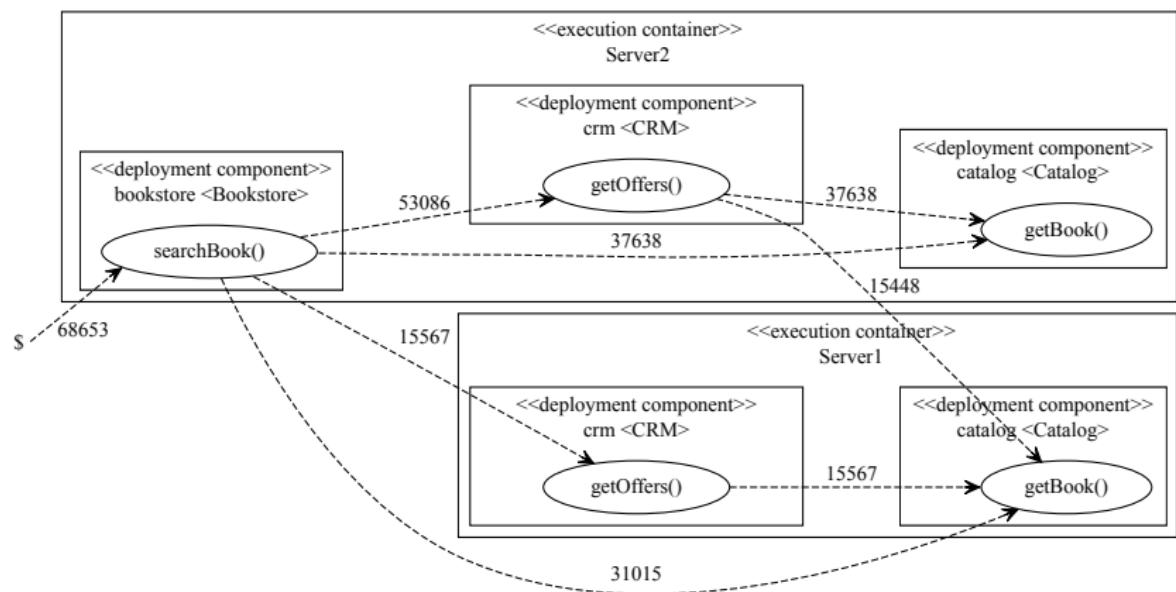

Response times (searchBook) & CPU utilization

Concurrent transactions

Varying Workload w/ Reconfiguration (Scenario 3)

Results (cont'd)

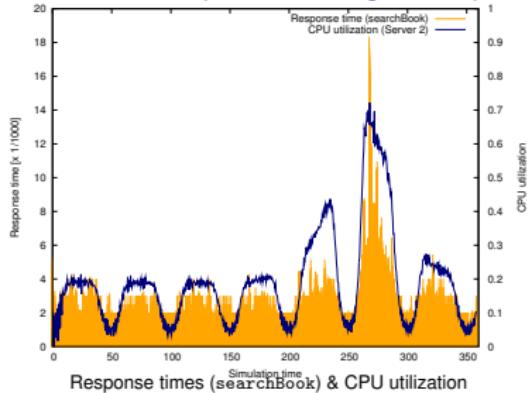

Reconstructed operation dependency graph (deployment view)

Comparison between Scenarios 1 & 2

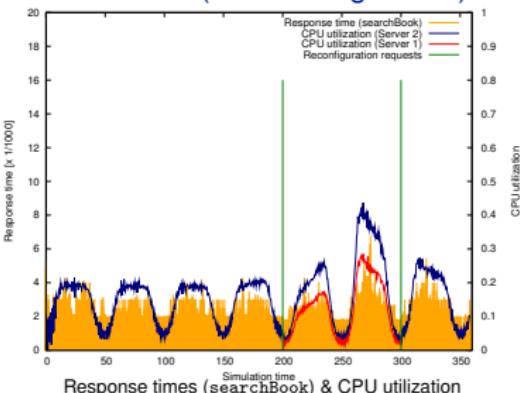

Evaluation > Scenario 3 (Varying Workload w/ Reconfiguration)

Scenario 2 (w/o Reconfiguration):

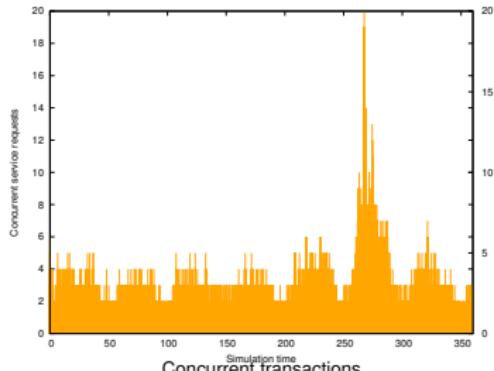

Response times (searchBook) & CPU utilization

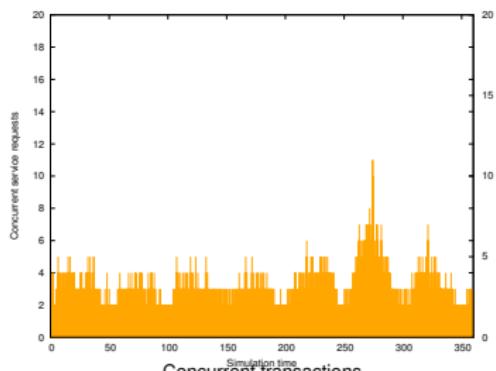

Scenario 3 (w/ Reconfiguration):

Response times (searchBook) & CPU utilization

Concurrent transactions

Concurrent transactions

- Implement missing PCM features: Parametric stochastic expressions
- Evaluation with more complex ...
 - Models
 - Workloads (from production systems)
- New features
 - Cost model for reconfigurations (e.g., delays for allocation/replication/...)
 - Additional strategies for dispatching requests among replicas
 - Additional runtime reconfiguration operations: (e.g., replace implementation [Mat09, Bun08])
 - Additional QoS properties (e.g., reliability of execution containers)
- Dependency injection (Guice): heavier use & external configuration
- As usual: Performance ;-)

Kieker Monitoring & Analysis Framework

Core Characteristics [vHRH⁺09]

- Flexible architecture (custom probes, readers, writers, analysis plug-ins)
- Integrated & extensible *record type model* for monitoring & analysis
- Logging, reconstruction, analysis/visualization of (distributed) traces
- Low overhead (designed for continuous operation in multi-user systems)
- Evaluated in industry case studies

Kieker

<http://kieker.sourceforge.net>

Setup

- Constant workload (log generated by script)
- Open workload with inter-arrival time 0.1
→ yielding 100% simulated CPU utilization
- Simulation time: 1000 time units

Goal

- Comparison of results/performance between SLAastic.SIM & SimuCom

Results (Duration [ms] of 50 simulation runs)

	<i>Min.</i>	<i>Median</i>	<i>Mean</i>	<i>Max.</i>	<i>Dev.</i>
SimuCom	6434	7179	7199	7873	287.24
SLAastic.SIM	4864	5325	5333	5833	161.25

(Duration excl. code generation (SimuCom) & initialization (SLAastic.SIM))
