

Capturing provenance information with **Kieker.WorkflowMonitor**

Peer C. Brauer
Wilhelm Hasselbring

Software Engineering Group
Christian Albrechts Universität

Agenda

- ▶ PubFlow
- ▶ An introduction to Kieker
- ▶ Collecting provenance data with Kieker

PubFlow

The project group

Software Engineering Group

Leibniz Information Centre
for Economics

What is PubFlow about?

▶ **Publication WorkFlows**

What is PubFlow about?

The goal of the project is it, to create a workflow environment for the work with scientific data based on established business workflow systems like Apache ODE, which increases the degree of automation in the publication process.

What is PubFlow about?

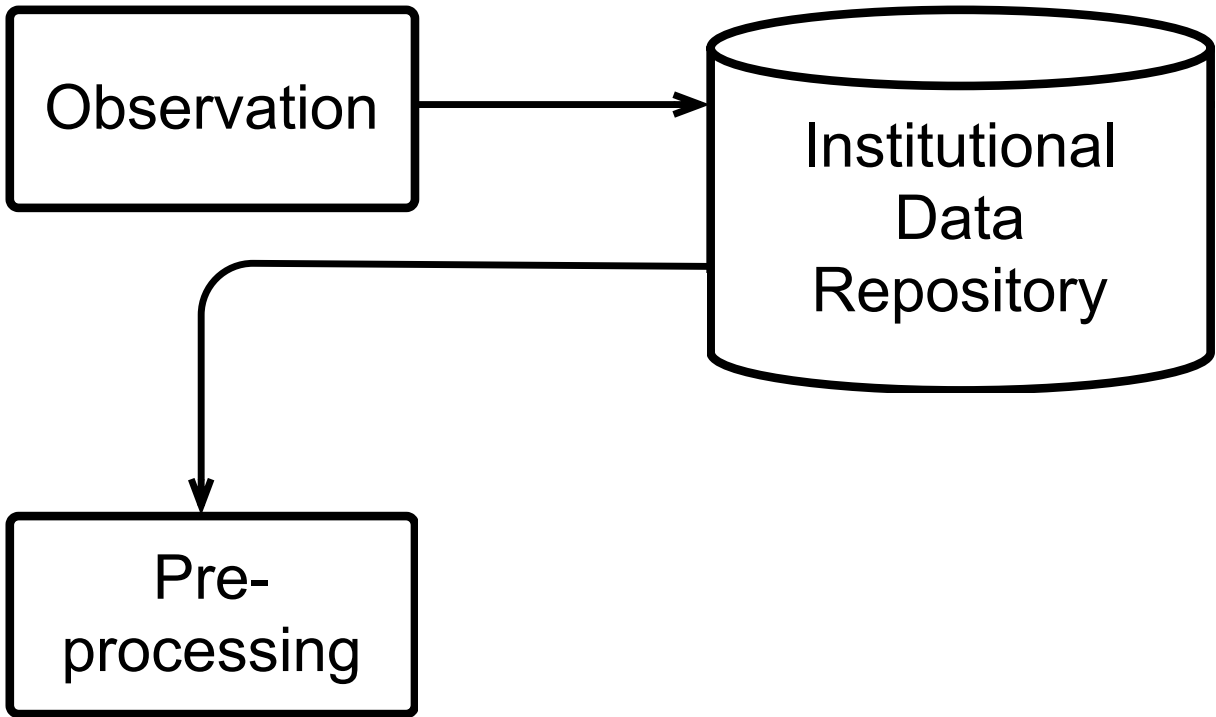

The goal of the project is it, to **create a workflow environment** for the work with scientific data based on established business workflow systems like Apache ODE, which increases the degree of automation in the publication process.

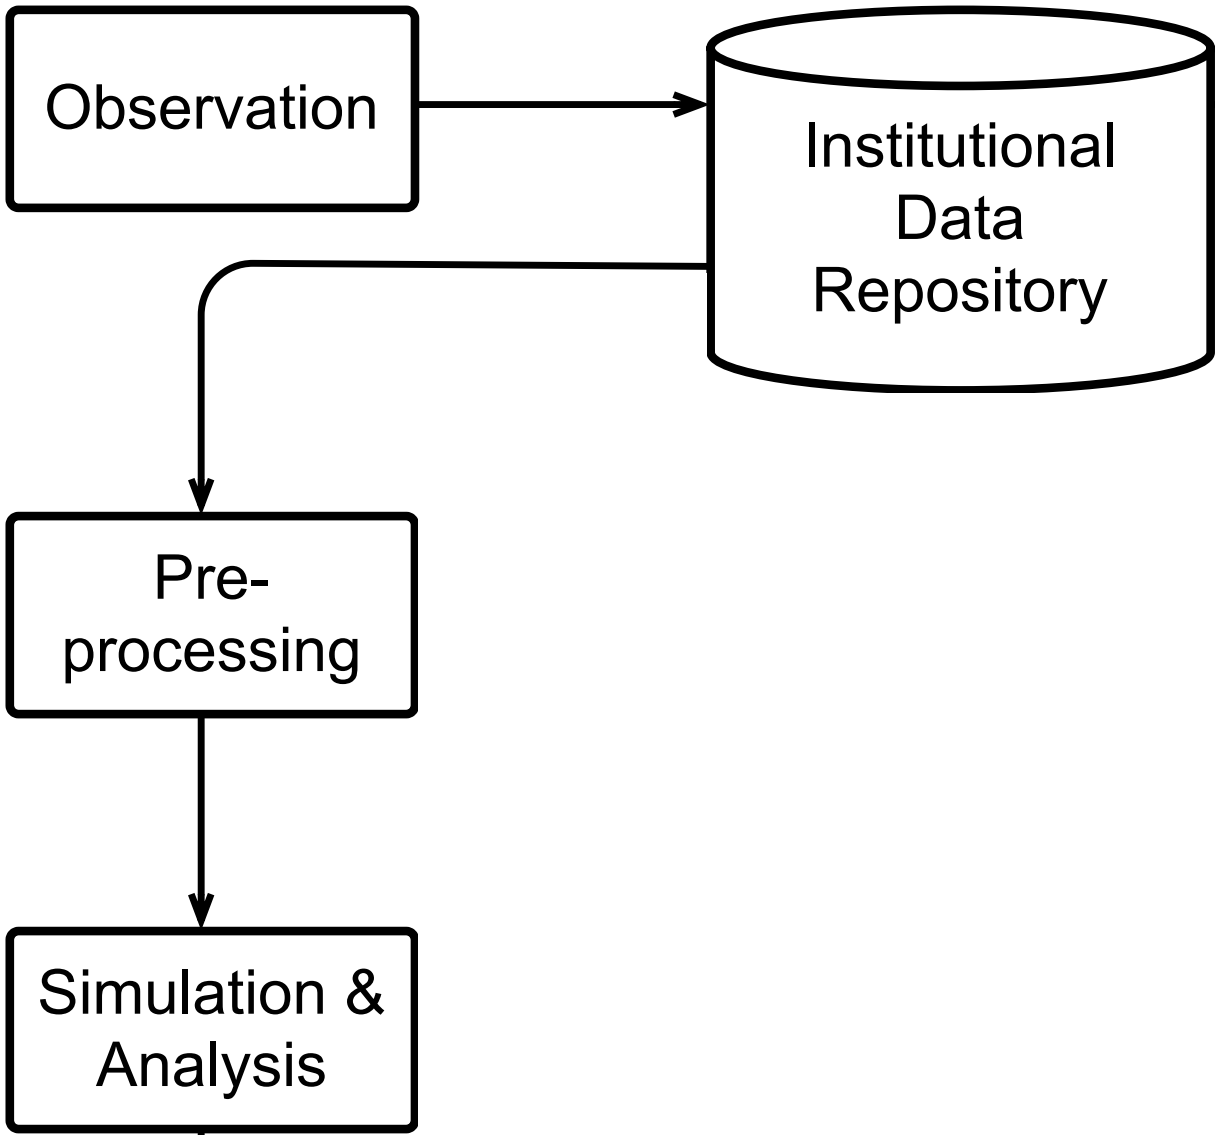

What is PubFlow about?

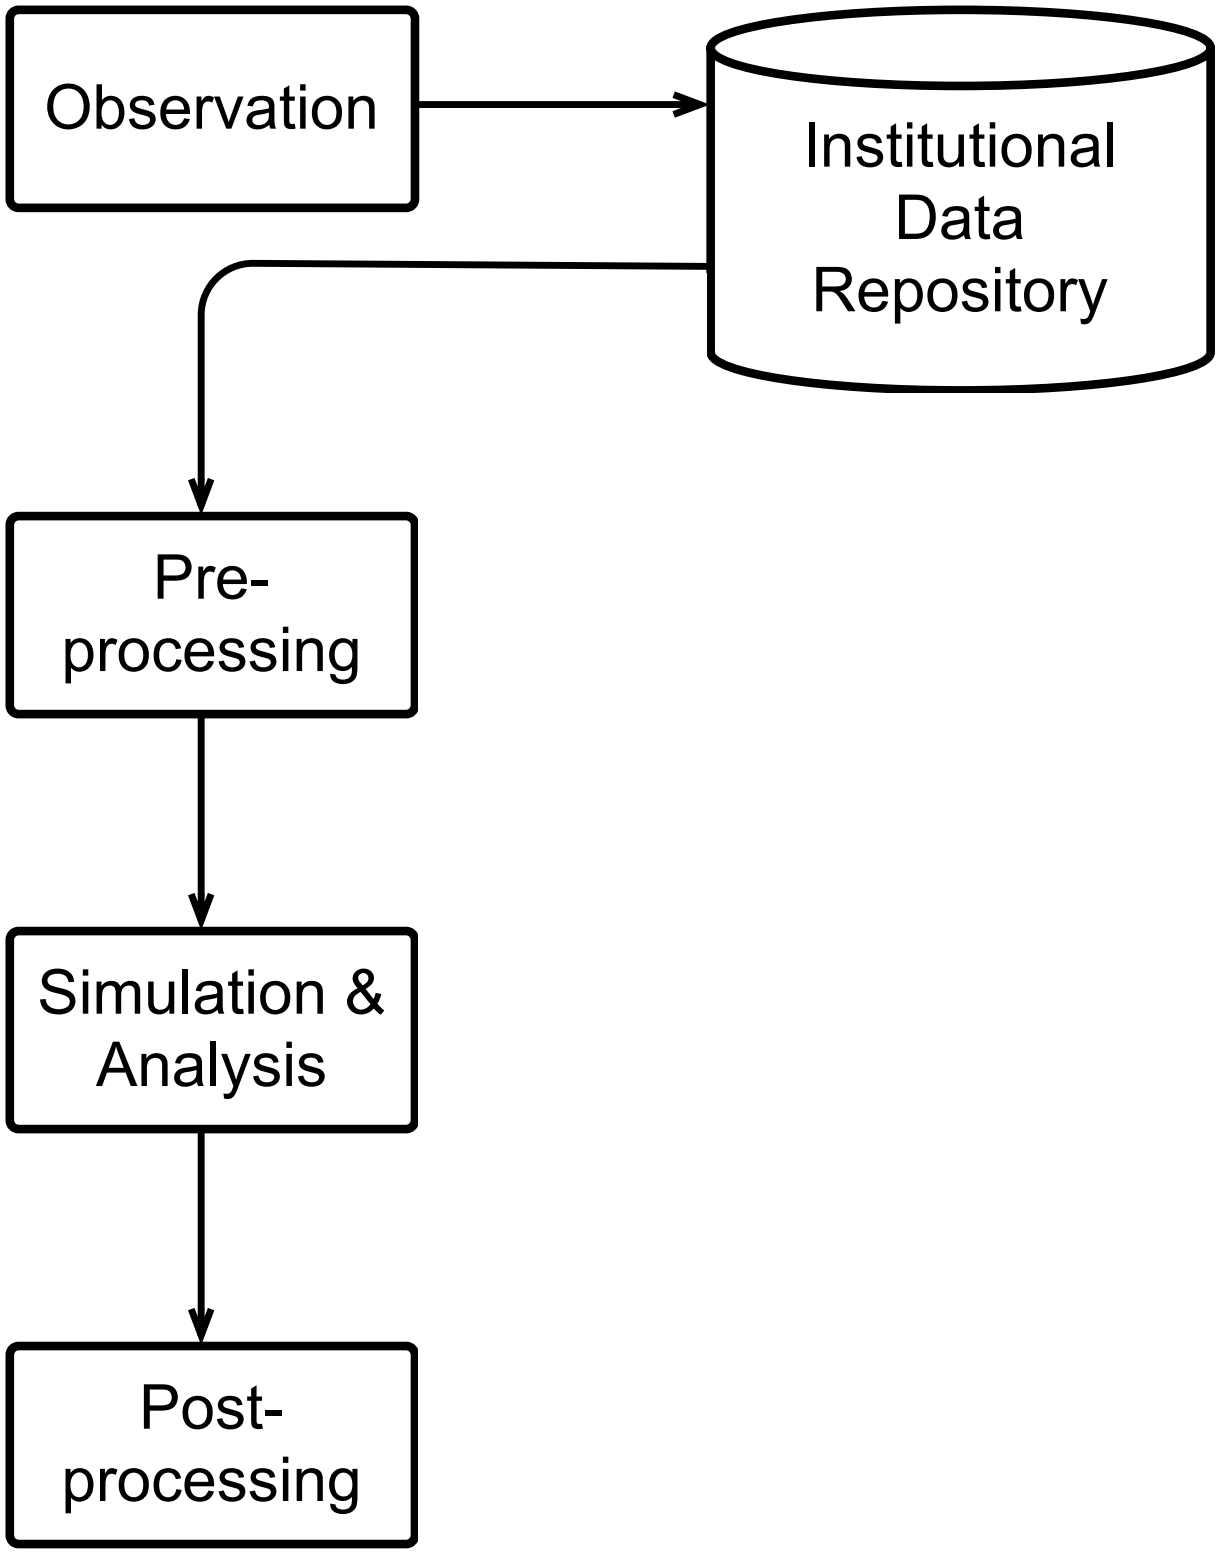

The goal of the project is it, to **create a workflow environment** for the work with scientific data based on established business workflow systems like Apache ODE, which **increases the degree of automation in the publication process.**

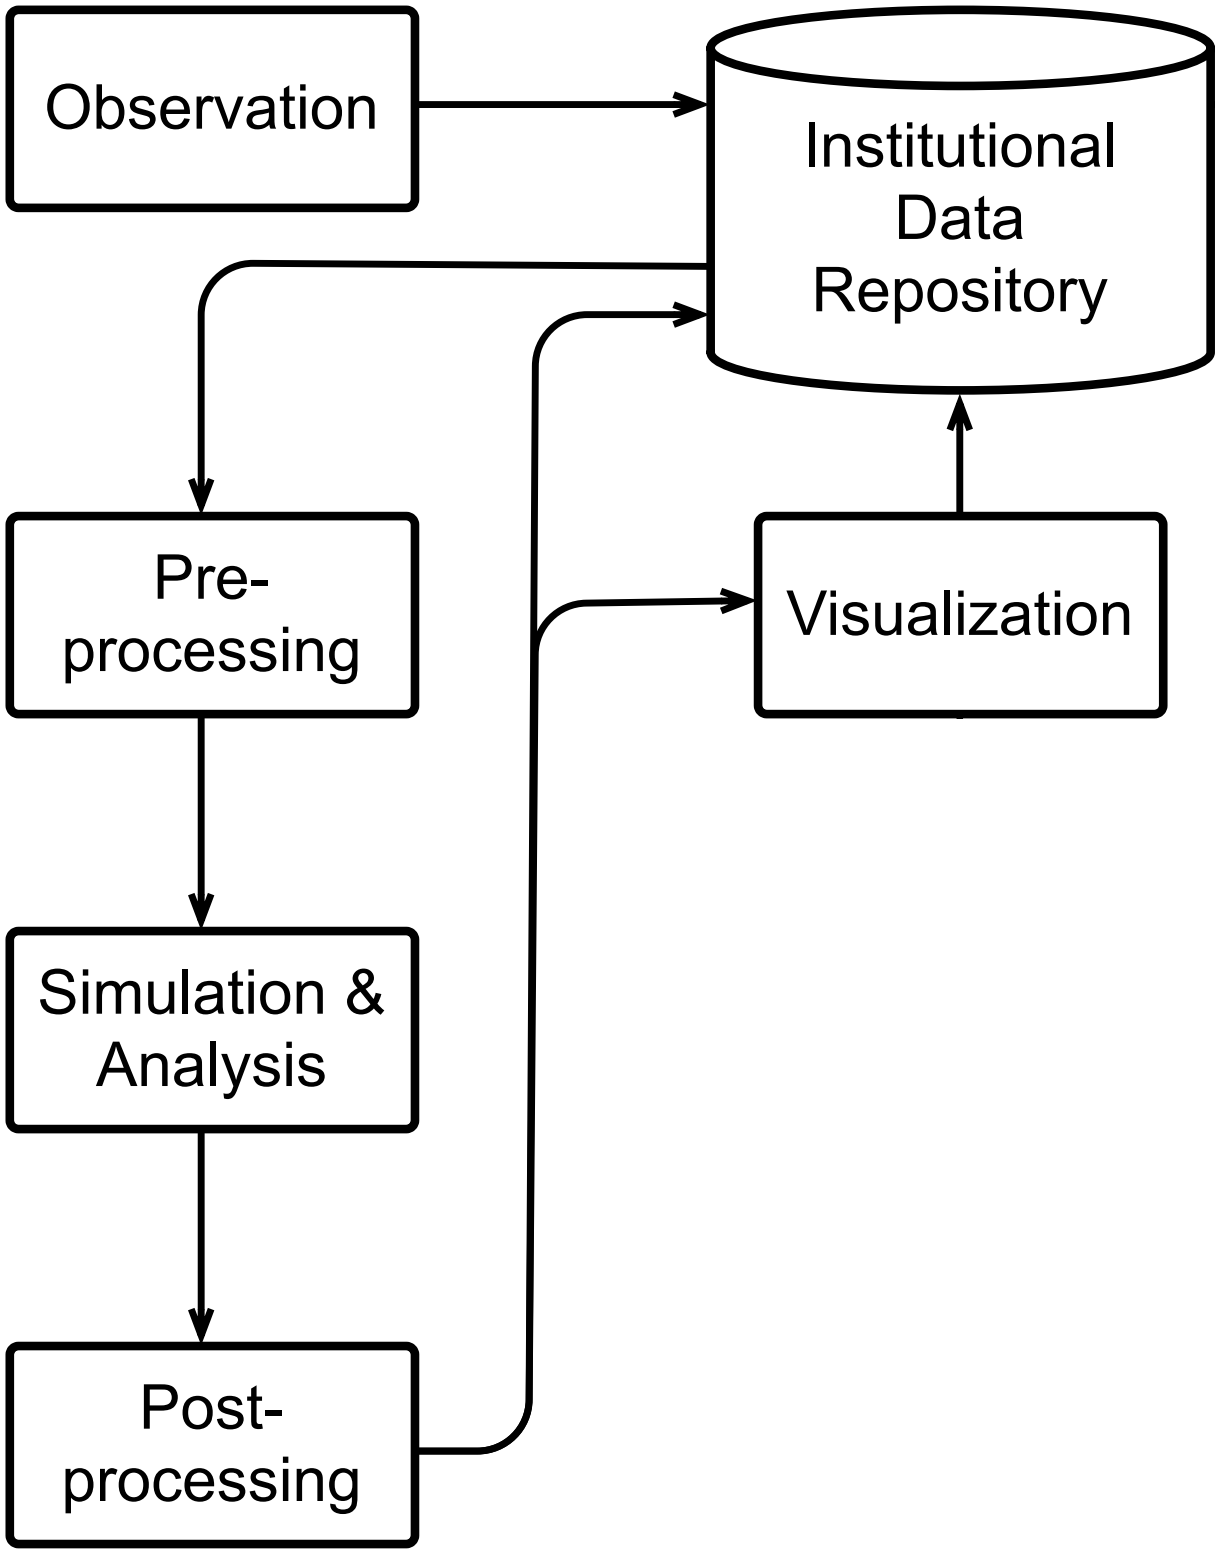

Observation

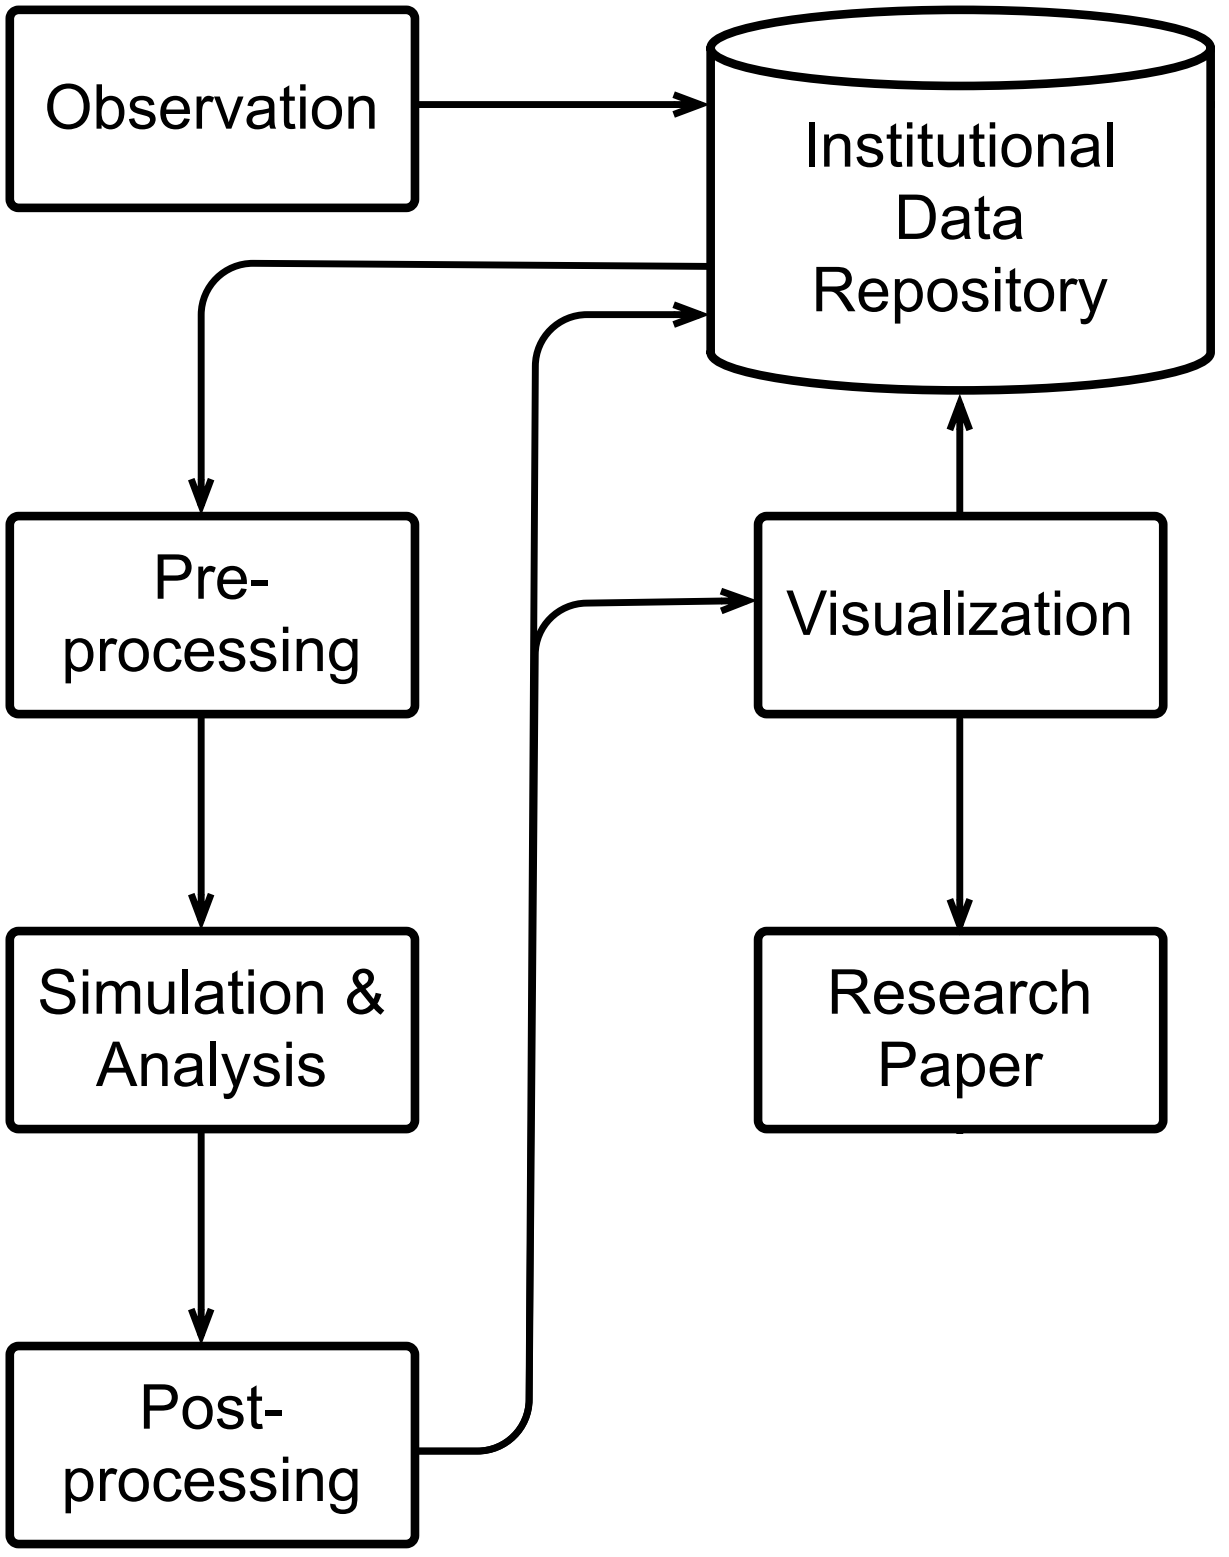

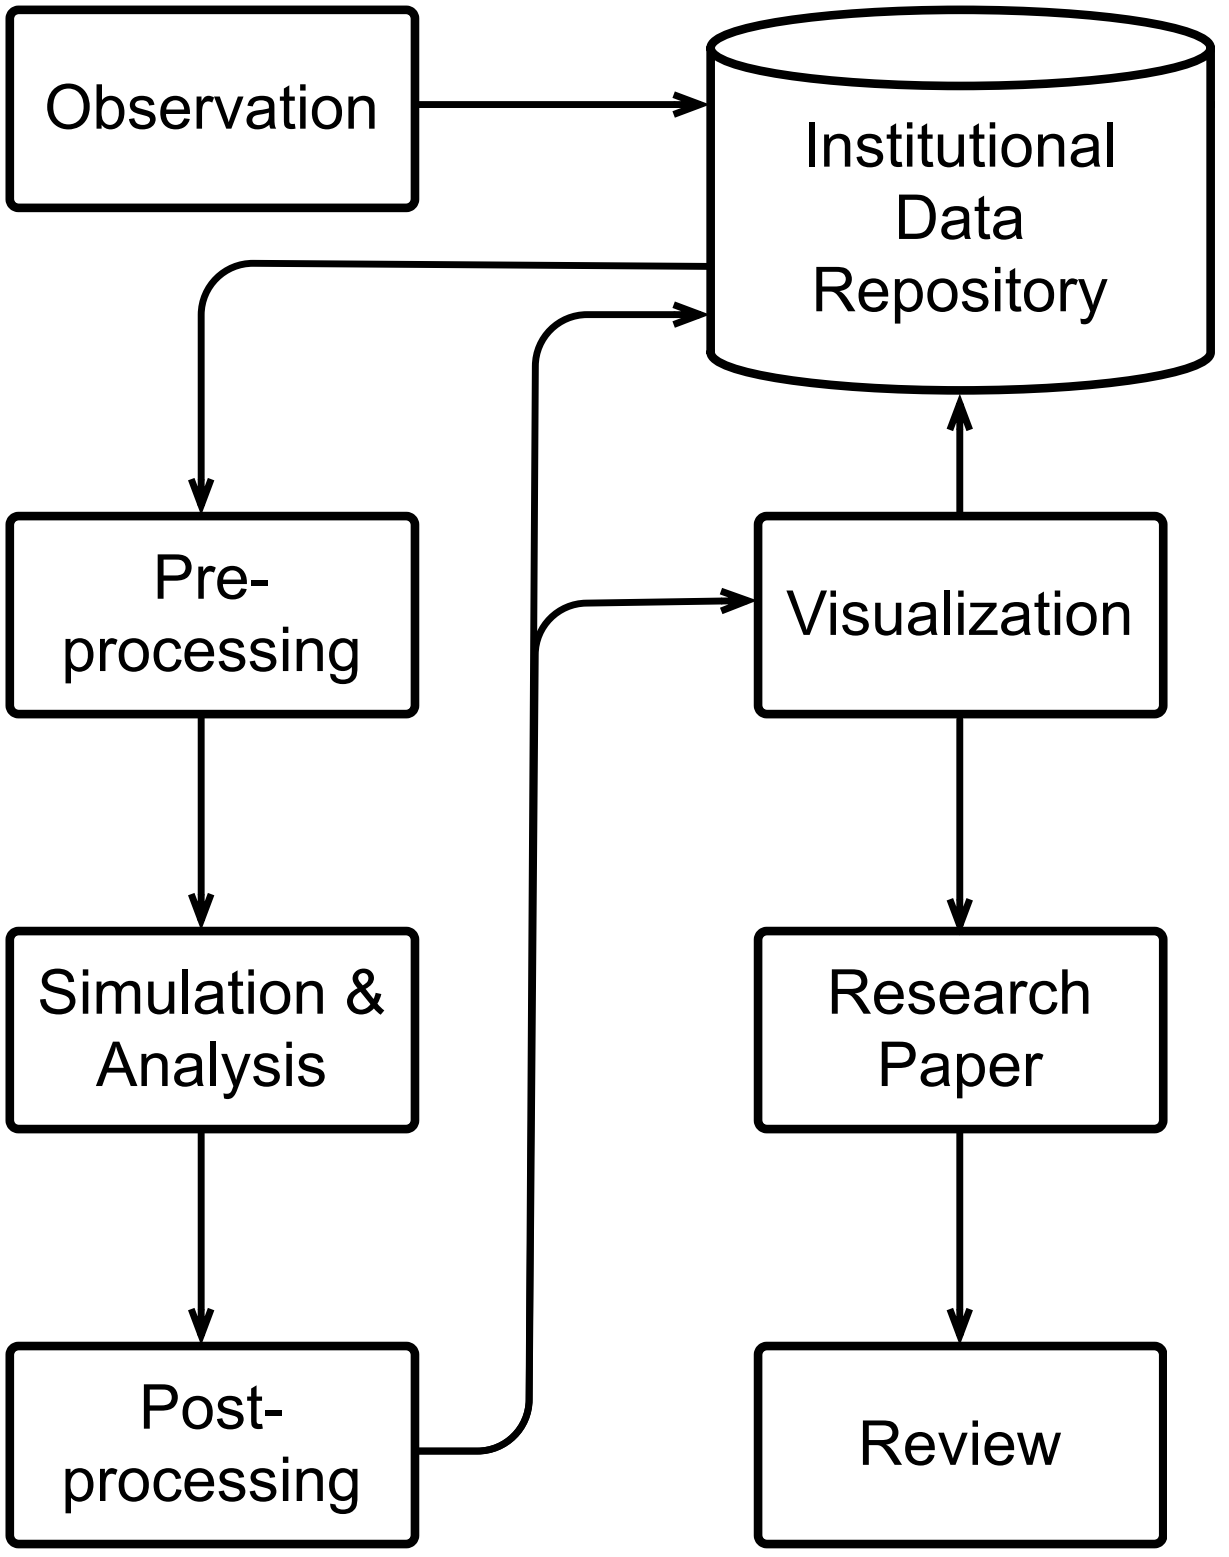

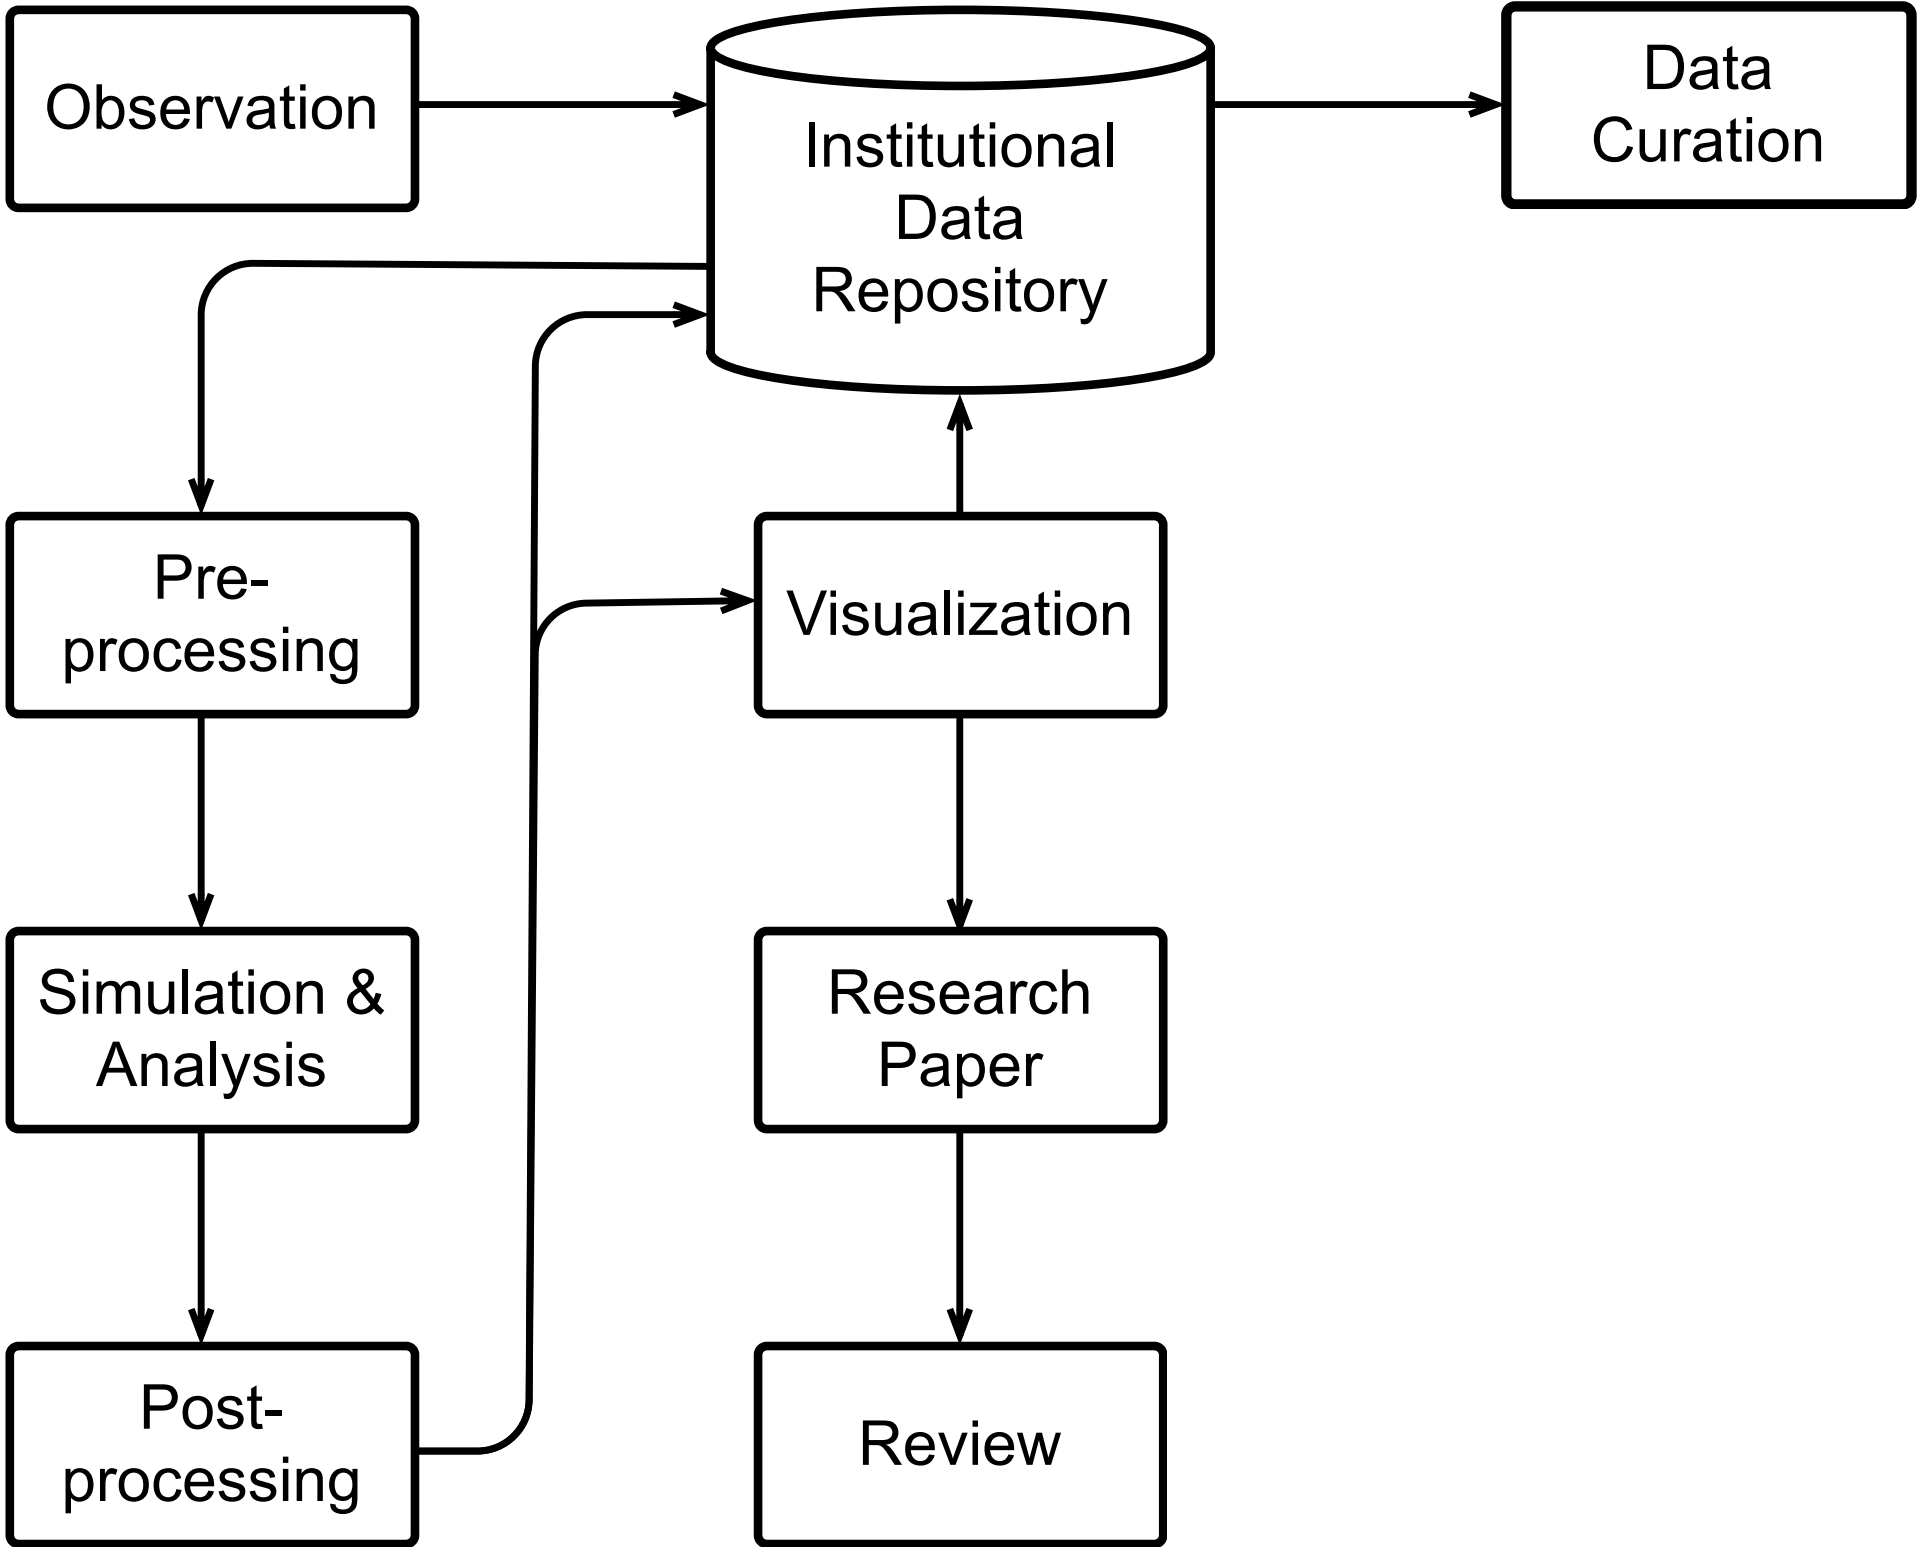

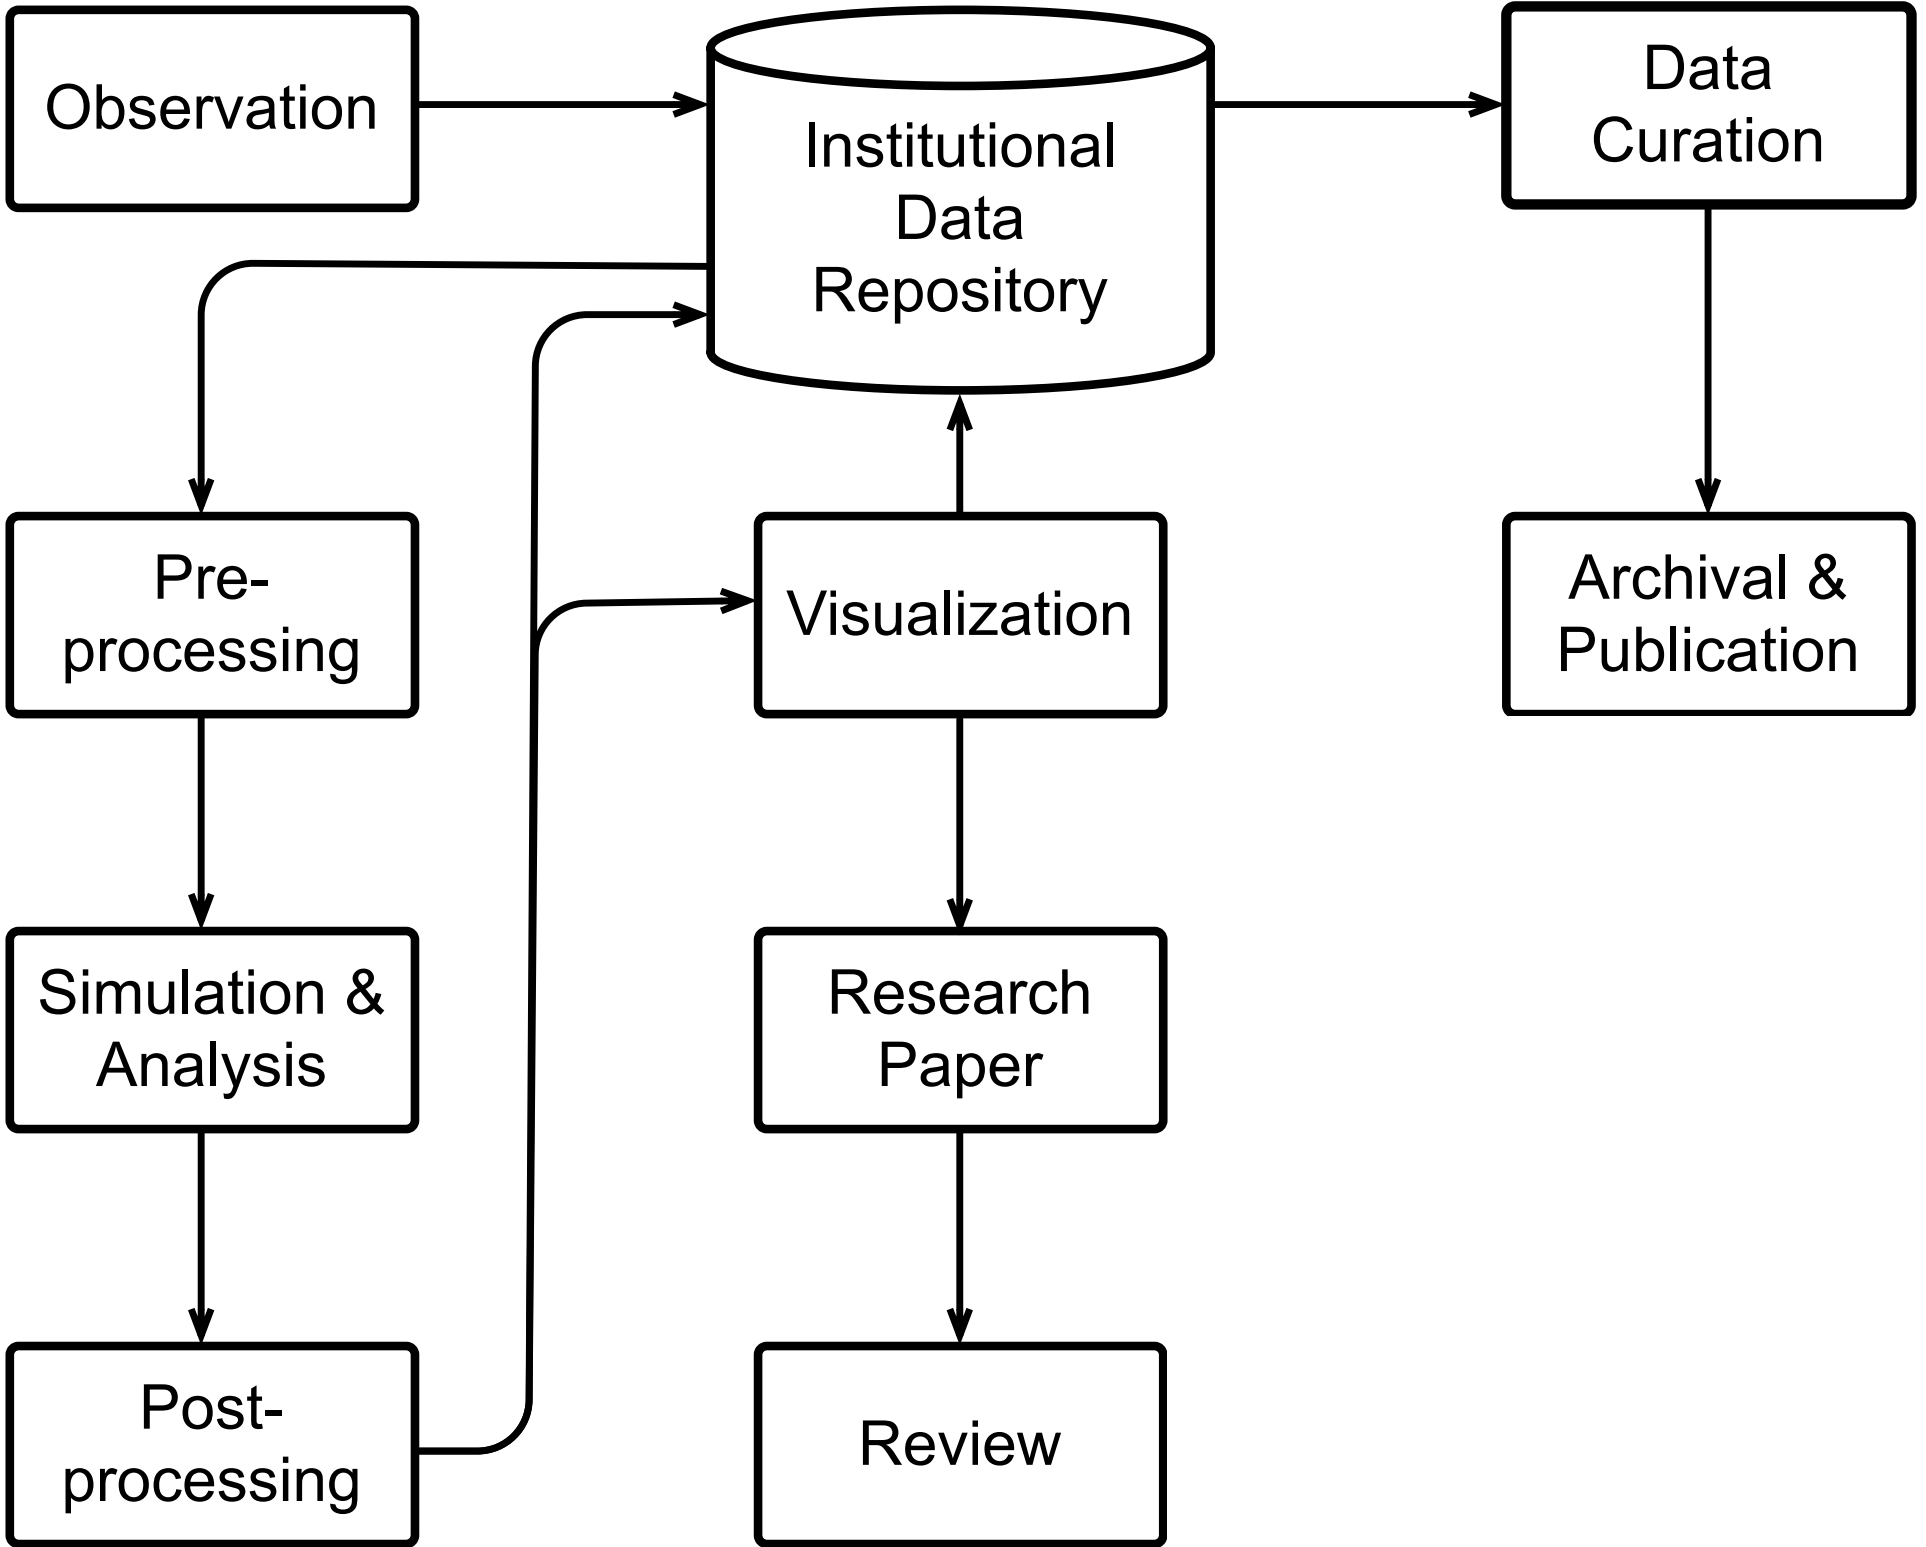

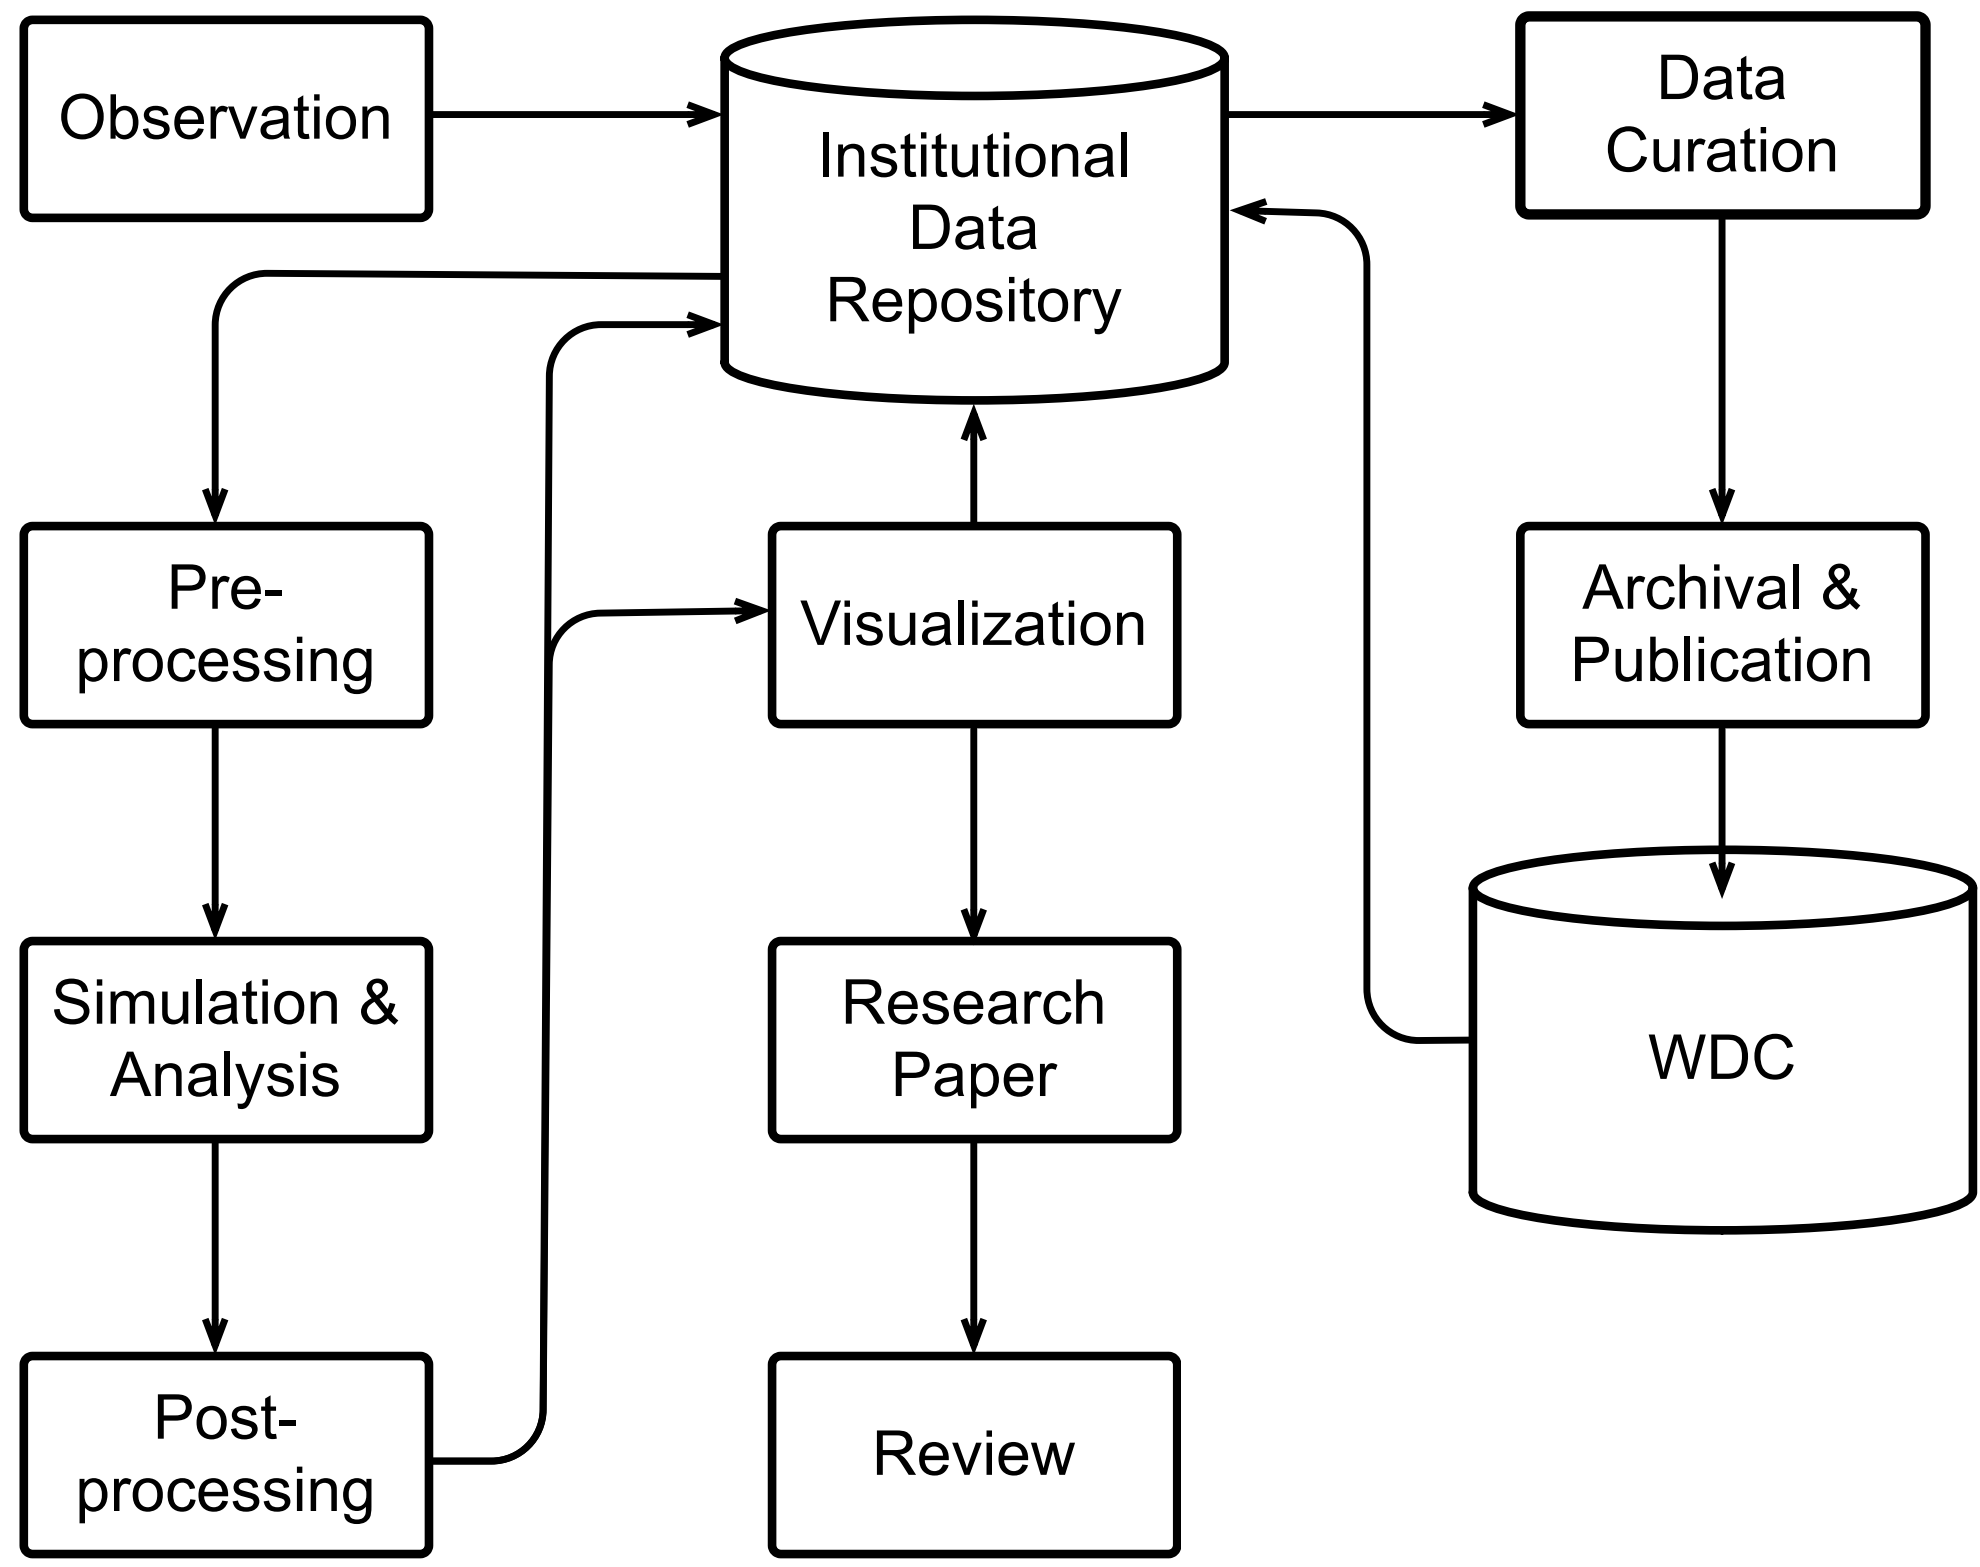

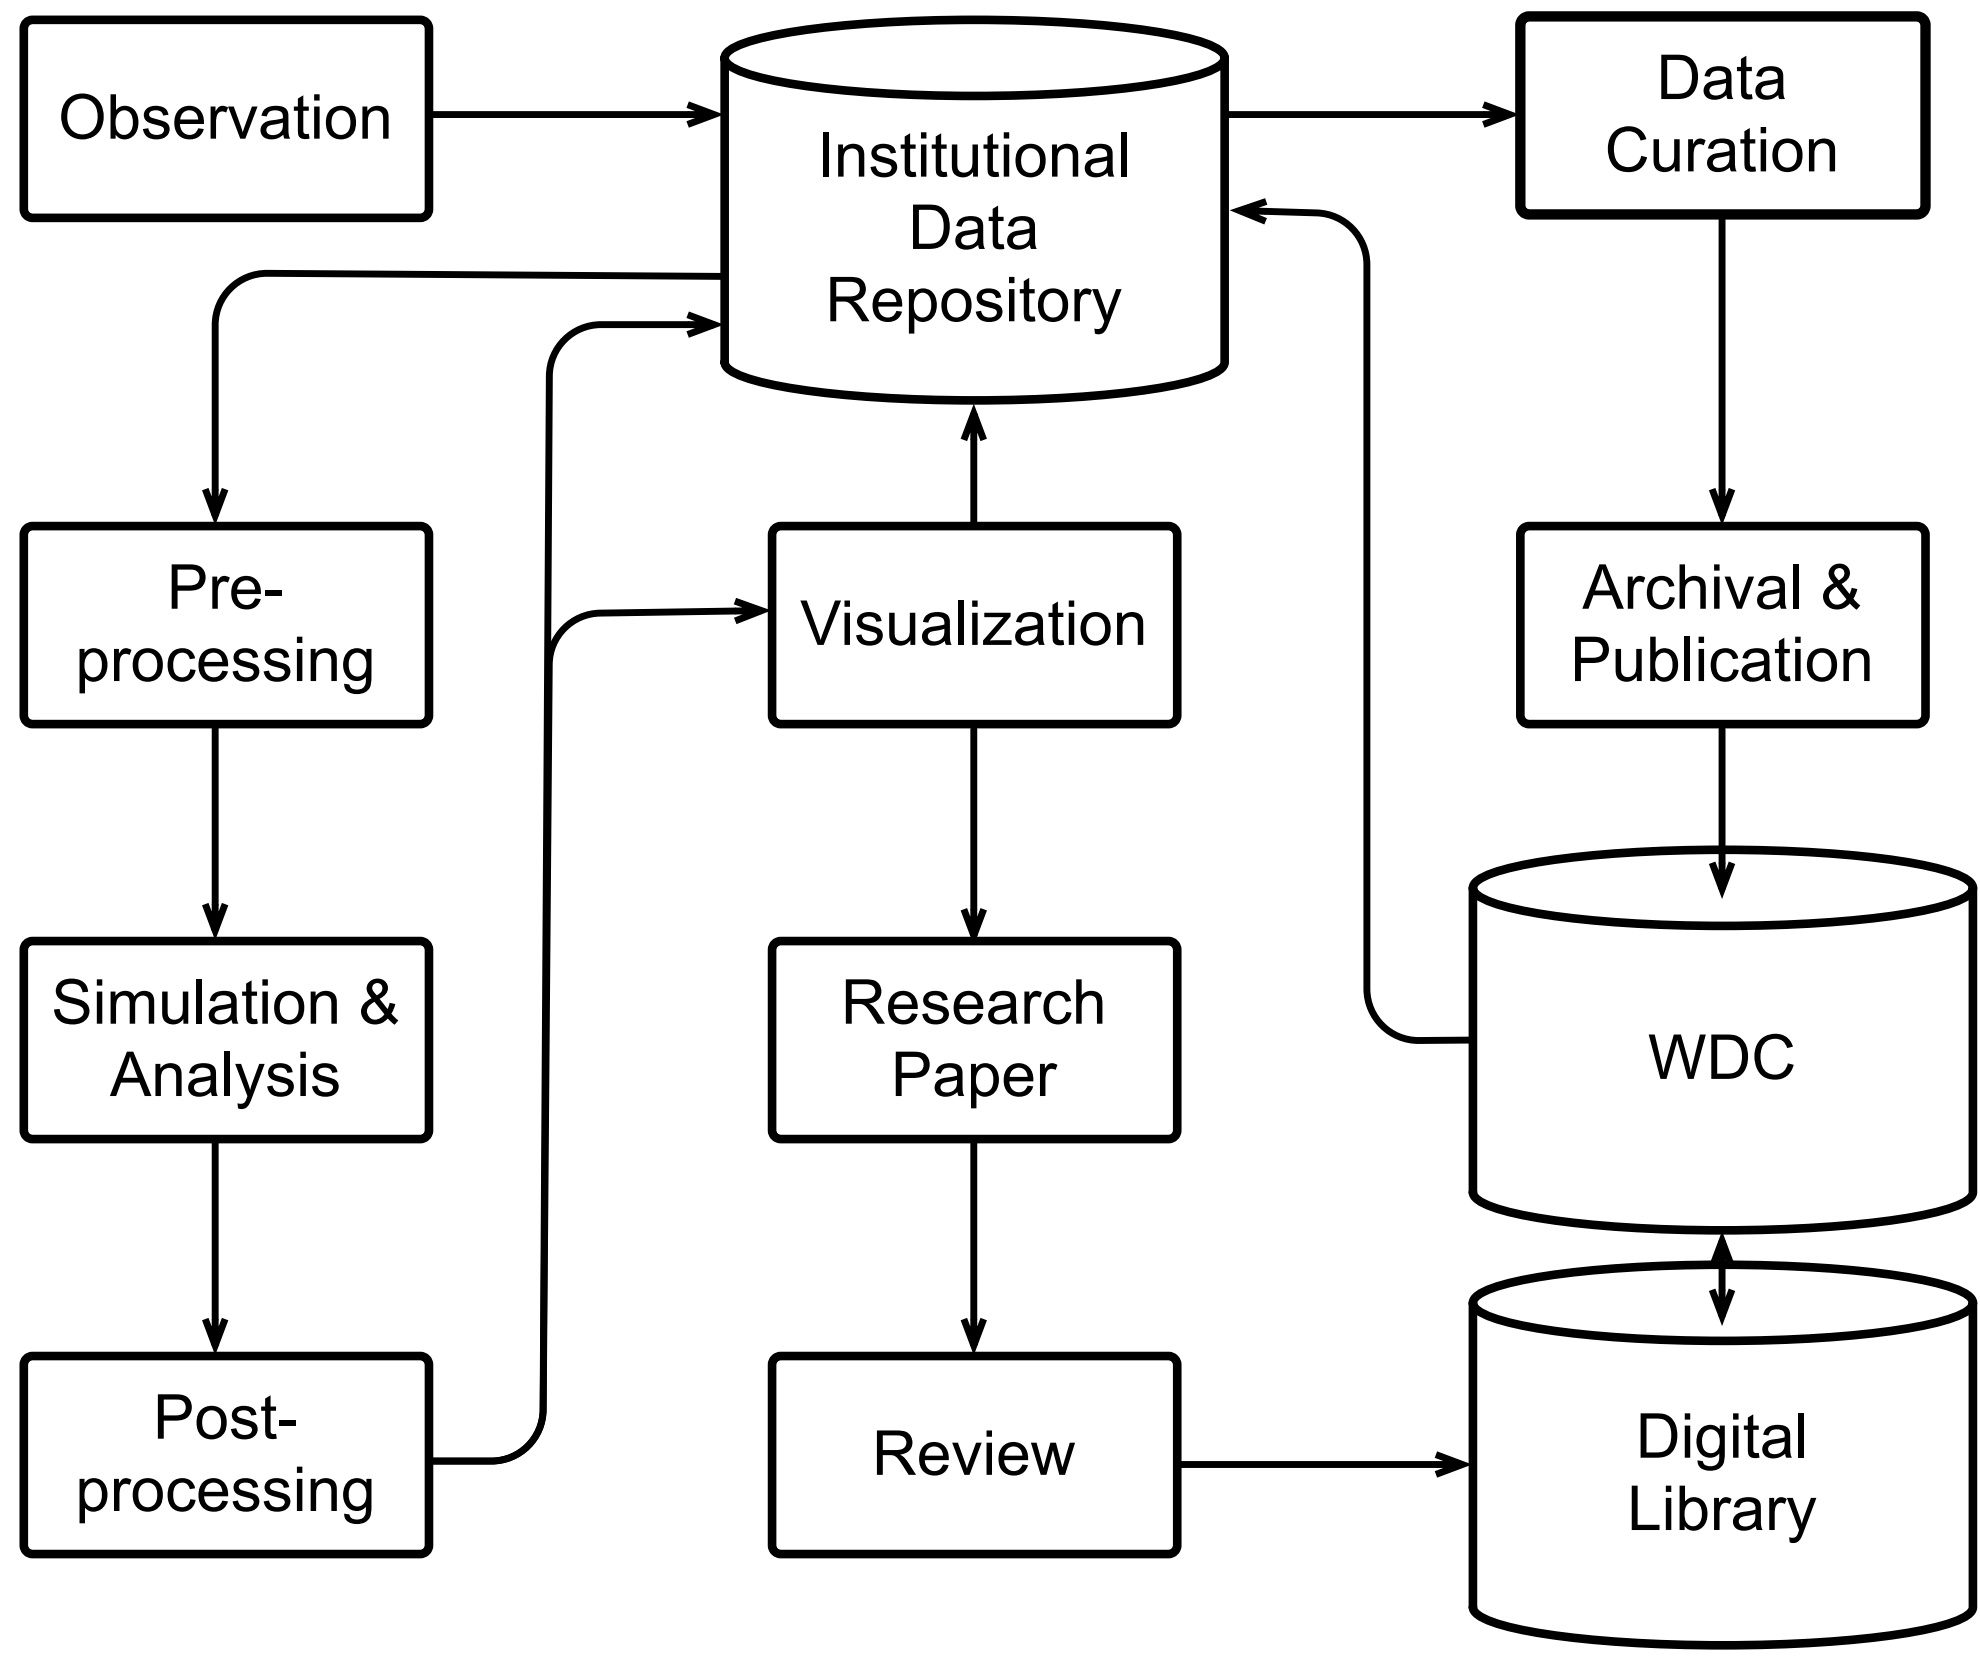

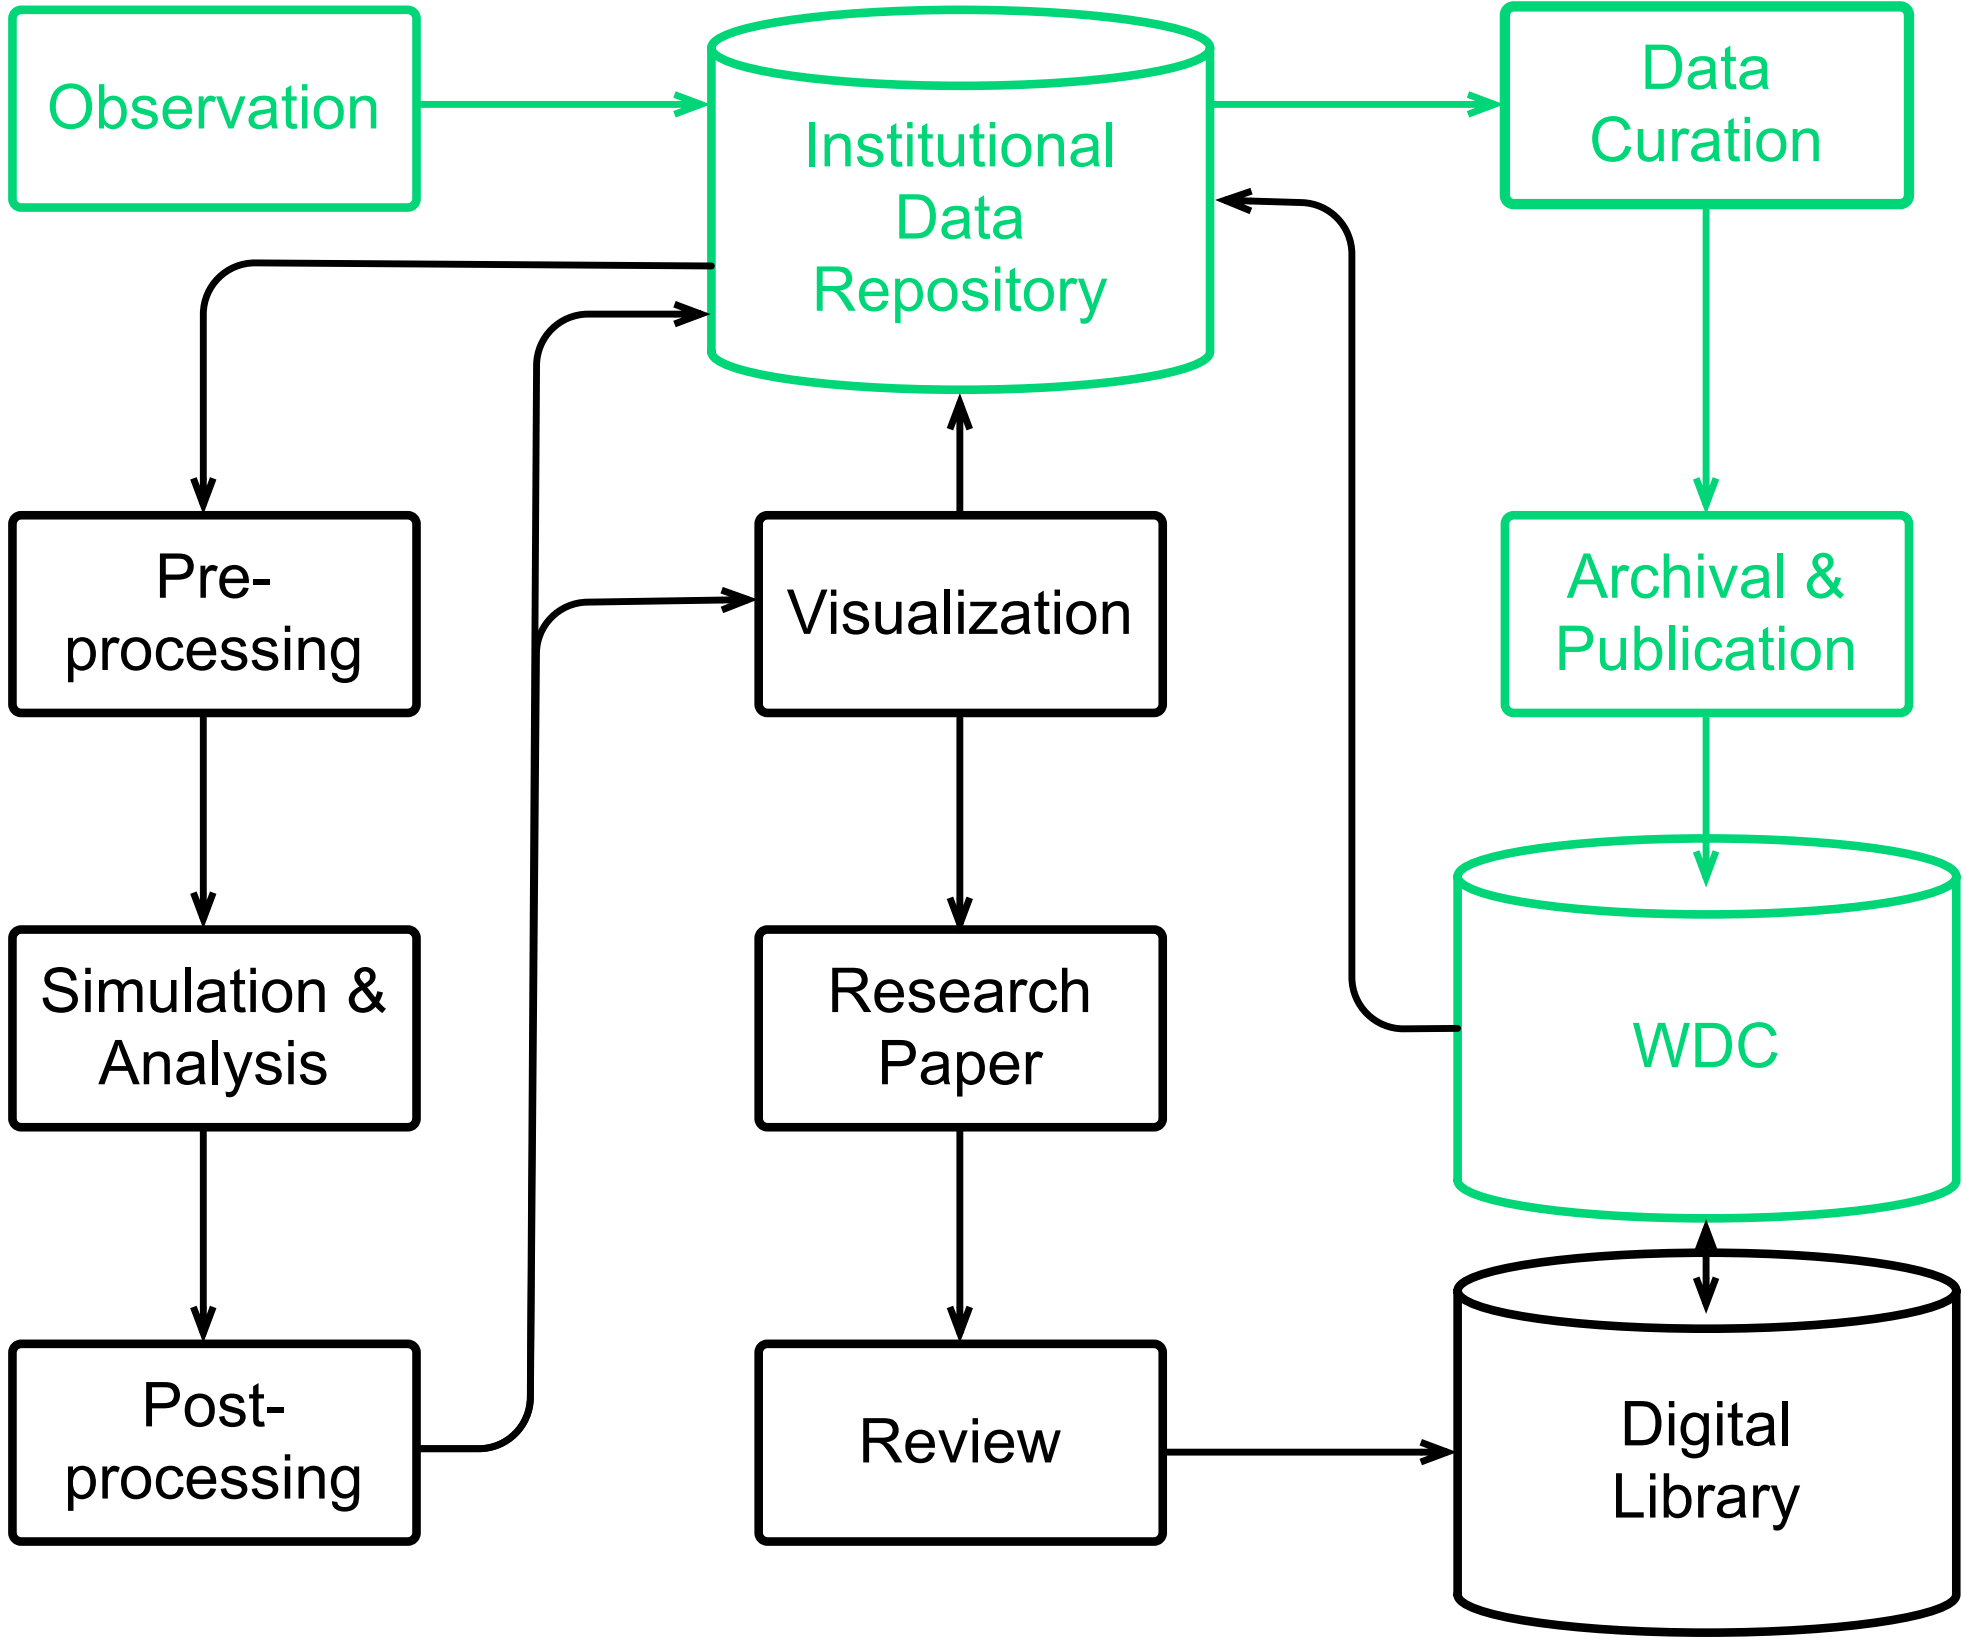

the case study

Kieker

a short introduction

What is Kieker?

- ▶ Kieker is a modular monitoring framework
- ▶ developed by the Software Engineering Group
CAU Kiel
- ▶ Kieker is open source (APL 2)

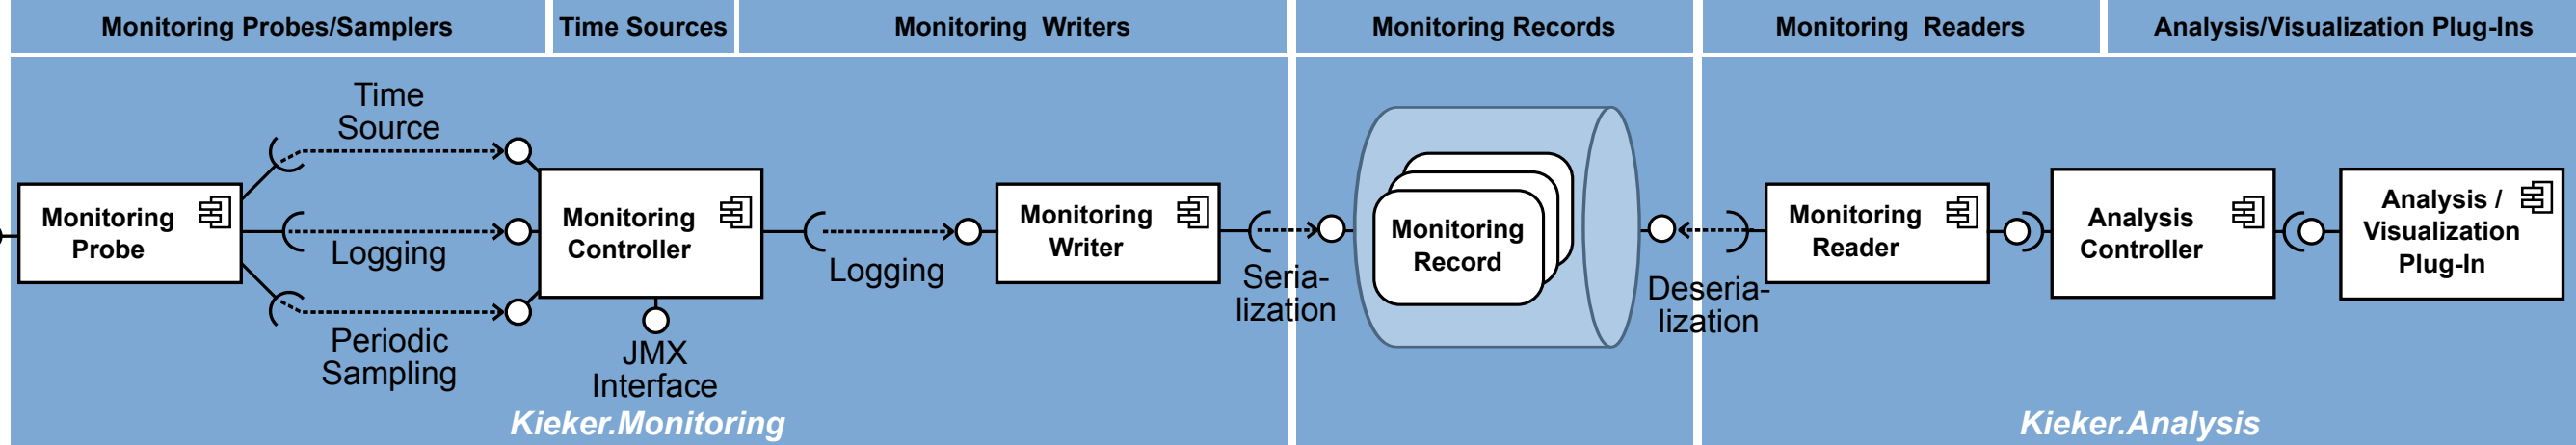

What is Kieker?

Kieker is distributed as part of SPEC® RG's repository of peer-reviewed tools for quantitative system evaluation and analysis

<http://research.spec.org/projects/tools.html>

Manual instrumentation	AspectJ	Spring	Servlet	CXF/SOAP	<your interception technology>	Servlet	Sigar	CPU utilization	Memory usage	<your technology>	<your monitoring probe>	System time (nanos)	<your time source>	File system	Java Messaging Service (JMS)	Java Management Ext. (JMX)	Database (SQL)	Named pipe	File system	Database (SQL)	<your monitoring writer>	Operation execution	Resource utilization	CPU utilization	Memory/swap usage	Current time	<your monitoring record type>	File system	Java Messaging Service (JMS)	Java Management Ext. (JMX)	Named pipe	Real-time replayer	<your monitoring reader>	Dependency graphs	Sequence diagrams	Call graphs	<your visualization>	<your trace analysis>	<your reconstruction plug-in>	<your analysis plug-in/tool>		
Control-flow tracing	Resource monitoring		System time (nanos)		Asynchr. writers		Syncr.		Operation execution		Resource utilization		CPU utilization		Memory/swap usage		Current time		File system		Java Messaging Service (JMS)		Java Management Ext. (JMX)		Named pipe		Real-time replayer		Dependency graphs		Sequence diagrams		Call graphs		Visualization		Trace analysis		Architecture reconstr.		Pipe and filter framework	

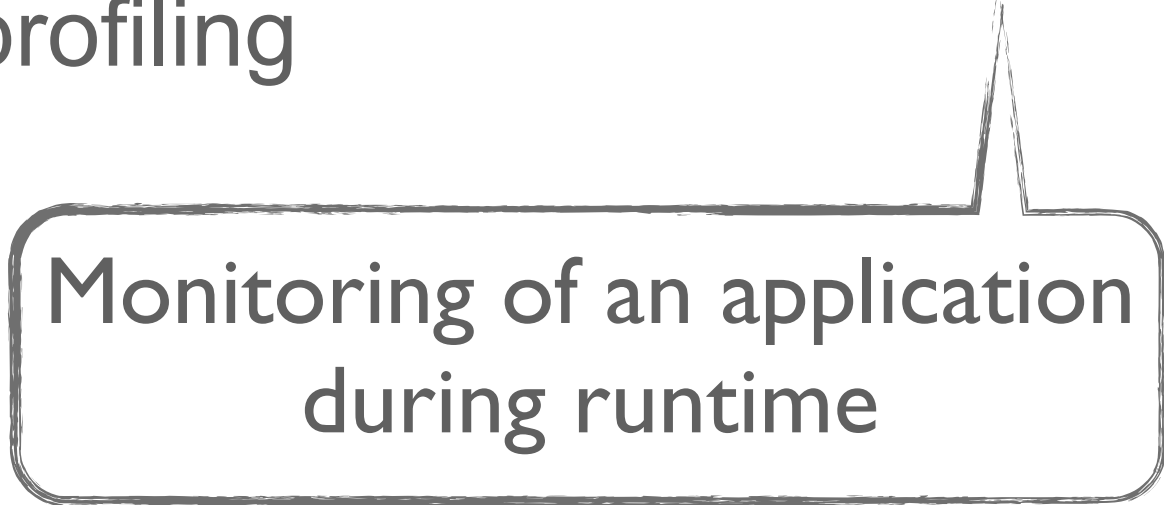

What is the scope of Kieker?

- ▶ Kieker **is** for application monitoring - **not** for profiling

What is the scope of Kieker?

- ▶ Kieker **is** for application monitoring - **not** for profiling

Monitoring of an application during runtime

What is the scope of Kieker?

- ▶ Kieker **is** for application monitoring - **not** for profiling

measure application performance
during development stage

Collecting provenance data with Kieker

requirements

Kieker.WorkflowMonitor > Process "Hello World"

Inspect Process Run #212

Process started
Time 11:59 a.m. 2012-02-26

Process completed
Time 12:00 a.m. 2012-02-26

Timeline

- 2012-02-26 11:59:50:1232
Process started by QUARTZ-Framework
- 2012-02-26 11:59:55:1232
Entered Sequence "Sequence"
- 2012-02-26 11:59:56:1232
Calling external web service

Start

End

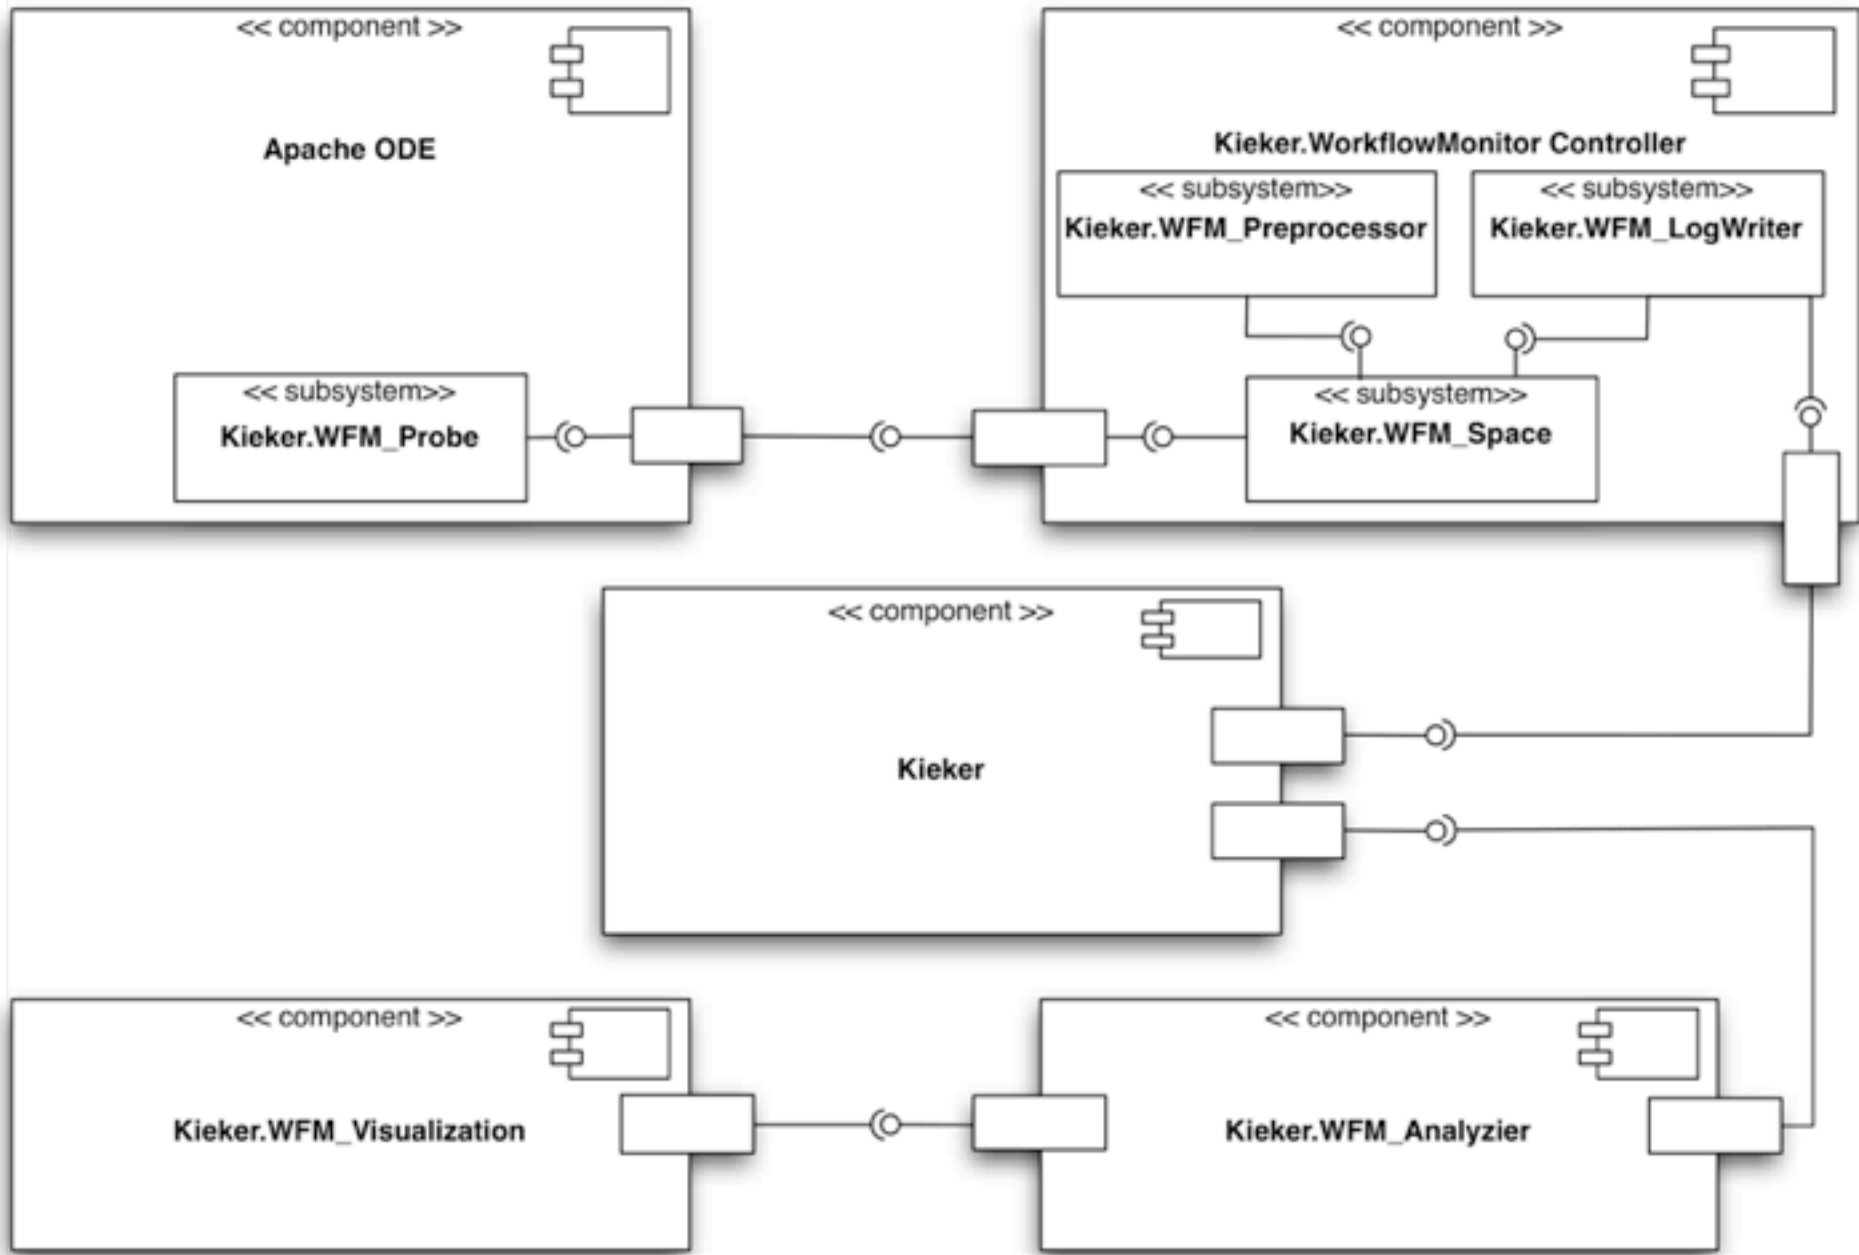

Success - Process exited without warnings

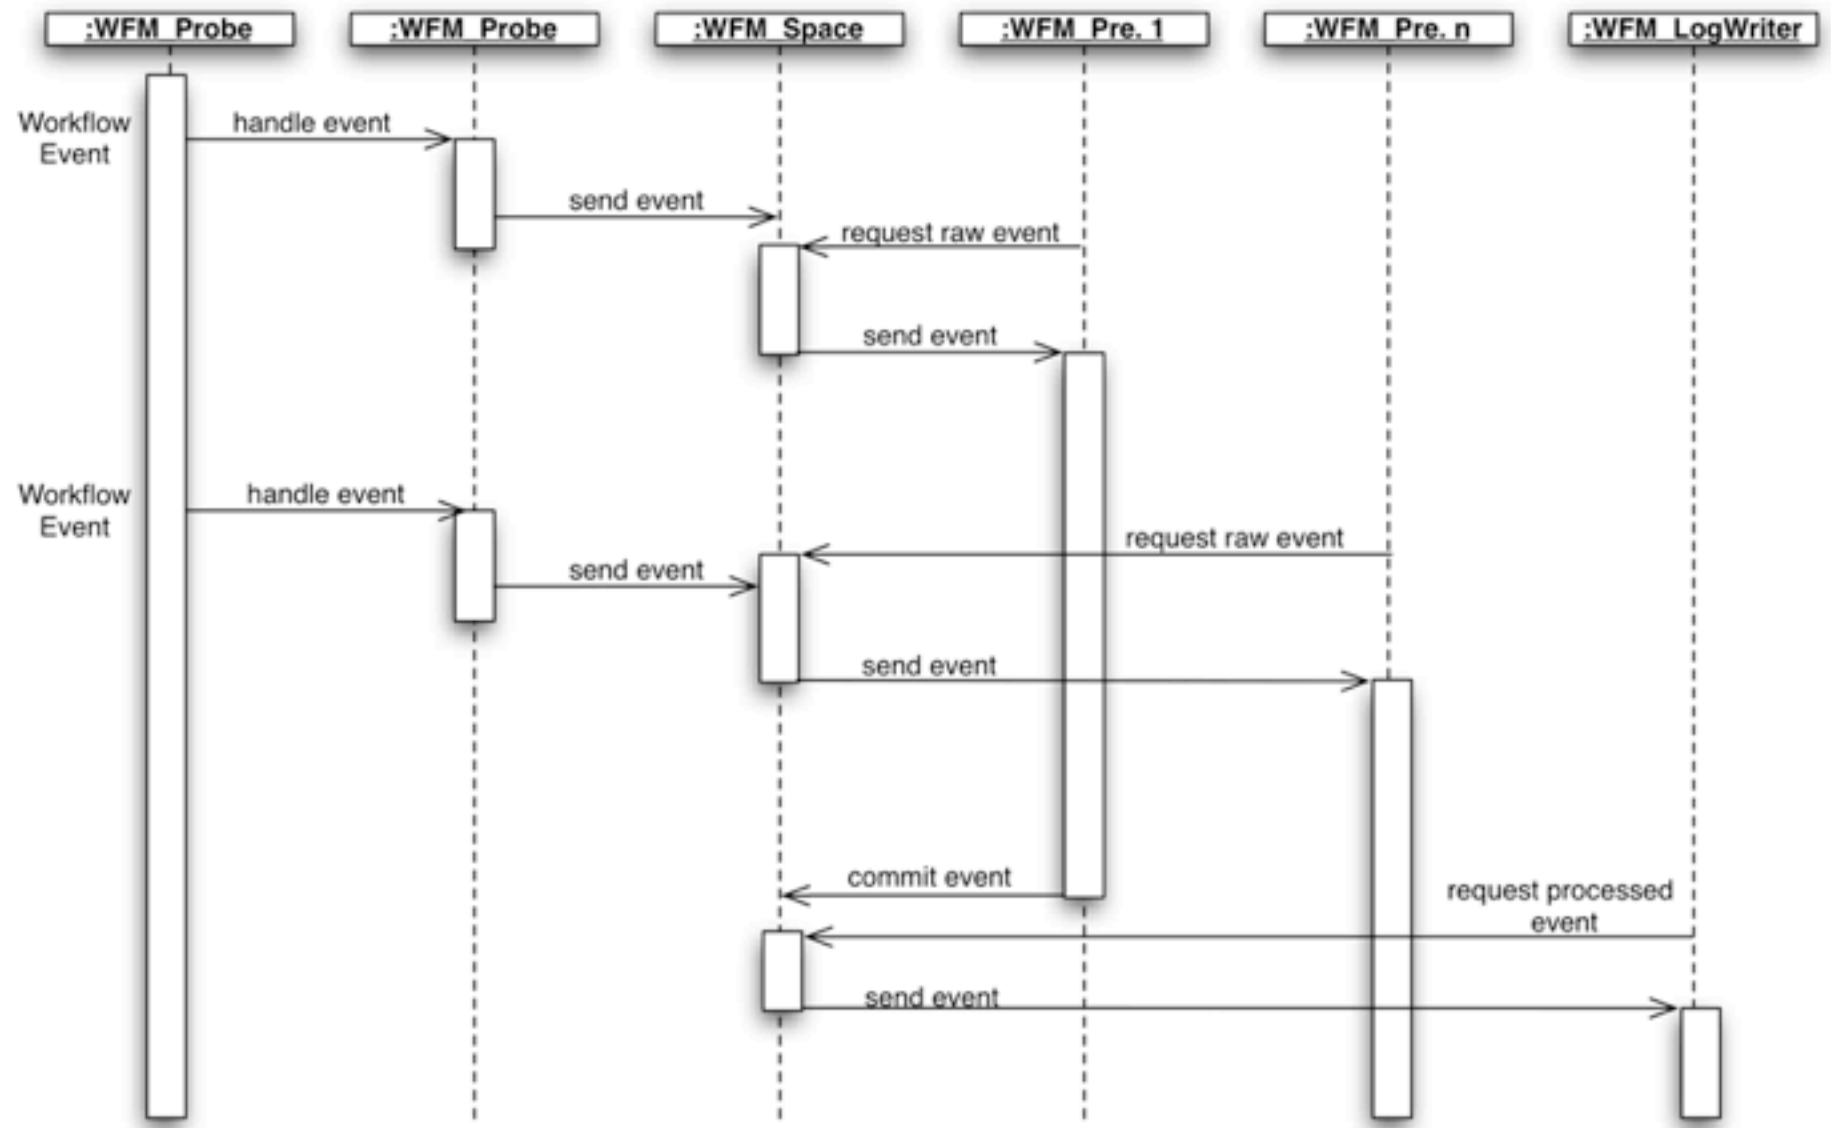

Kieker.WorkflowMonitor > Process "Hello World" ✕

Assign Monitoring Profiles

Webservice Calls	▼	<input checked="" type="checkbox"/> EIN	<input type="checkbox"/> AUS
Basic IO	▼	<input type="checkbox"/>	<input checked="" type="checkbox"/> AUS
XSLT Transform	▼	<input type="checkbox"/>	<input checked="" type="checkbox"/> AUS
enter Subprocess	▼	<input checked="" type="checkbox"/> EIN	<input type="checkbox"/> AUS

Success - New Profile assigned

```
<monitor:profile name="provenanceLight">
  <monitor:targetelement type="activity" >
    <monitor:eventtype>activityEnabledEvent</monitor:eventtype>
    <monitor:eventtype>activityDisabledEvent</monitor:eventtype>
  </monitor:targetelement>
  ...
  <monitor:targetelement type="variable" >
    <monitor:eventtype>VariableModificationEvent</monitor:eventtype>
    <monitor:eventtype>VariableReadEvent</monitor:eventtype>
  </monitor:targetelement>
  ...
  <monitor:event type="VariableModificationEvent">
    <monitor:fokus>varName</monitor:fokus>
    <monitor:fokus>newValue</monitor:fokus>
  </monitor:event>
</monitor:profile>
```
