1 S-Fig. 2: Scatterplots for direct comparison between model output of simulations 1 (PWC)
 2 and 2 (PE) and observations. The model was subsampled at time and location of observations.
 3 For the halocarbons, observations from 23 aircraft campaigns as illustrated in fig. 3a were
 4 used to create this scatterplot. For DMS, observations from ship and aircraft campaigns as
 5 described in figure 3b were taken into account.

6

7 Equations to compute error metrics

8

9 Error metrics are computed according to Yu et al. (2006) with N=number of data pairs
 10 observation and model output, M=model output and O=observation.

11 Mean bias

$$B_{mb} = \frac{1}{N} \sum (M_i - O_i) = \bar{M} - \bar{O}$$

12 Mean absolute gross error

$$E_{MAGE} = \frac{1}{N} \sum |M_i - O_i|$$

13 RMSE

$$E_{RMSE} = \left[\frac{1}{N} \sum (M_i - O_i)^2 \right]^{\frac{1}{2}}$$

14 Fractional bias

$$B_{fb} = \frac{1}{N} \sum \frac{(M_i - O_i)}{(M_i - O_i)/2}$$

1 Fractional absolute error

$$E_{fae} = \frac{1}{N} \sum \frac{|M_i - O_i|}{(M_i - O_i)/2}$$

2 Normalized mean bias factor

$$3 \quad B_{nmbf} = \frac{\bar{M}}{\bar{O}} - 1 \text{ for } \bar{M} \geq \bar{O}$$

4

$$5 \quad B_{nmbf} = 1 - \frac{\bar{O}}{\bar{M}} \text{ for } \bar{O} \geq \bar{M}$$
