

# Enabling Software Architecture Comparison with ExplorViz

Daniel Teut

20.09.2019

- ▶ Comparison of software architecture can be very useful in different scenarios
- ▶ Manual comparison by comparing code or the file structure
- ▶ Very slow and error prone

- ▶ Develop an extension for ExplorViz
- ▶ Two functionalities
  - ▶ Comparing two landscapes with each other
  - ▶ Calculating a history between multiple landscapes
- ▶ Evaluate the implemented software

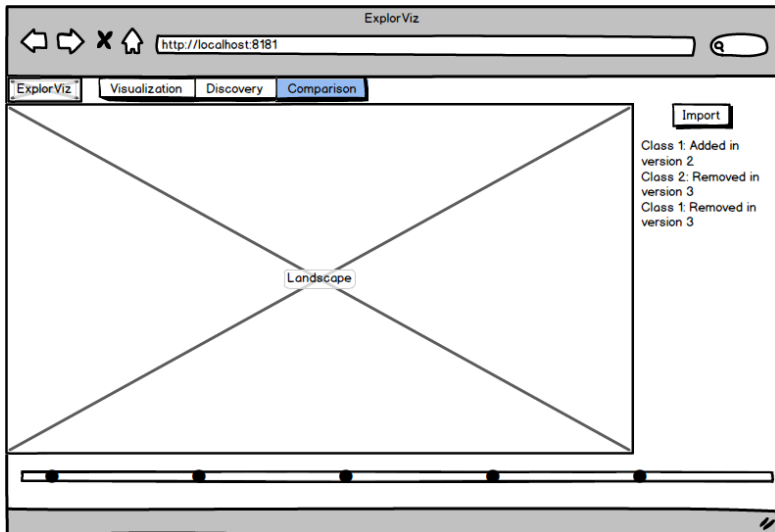

- ▶ ExplorViz uses Microservice Architecture
- ▶ It is split into the frontend and the backend
- ▶ The frontend is extended via an ember addon
- ▶ The backend extension is its own server

- ▶ Two resources for the features
- ▶ Changes are characterized through three attributes:
  - ▶ ADDED
  - ▶ DELETED
  - ▶ ORIGINAL

- ▶ Gets two timestamps from frontend
- ▶ Landscapes are imported from ExplorViz's history service
- ▶ Compares exactly two landscapes with each other
- ▶ Every application, component, class and communication is compared with each other
- ▶ Changes are embedded into the landscape
- ▶ Uses full qualified name of entities

sampleApplication	explorviz	1234	ADDED
		4567	DELETED
	sampleServer	1234	DELETED
		4567	ADDED
sampleServer	net	4563	ADDED
	explorviz	8969	DELETED
		2345	ADDED

- ▶ User uploads multiple landscapes
- ▶ Extension extends landscape drawing components
- ▶ Checks status in the overridden methods and colors accordingly
- ▶ History is checked for the currently highlighted entity
- ▶ Appropriate entries are then displayed in a table

[Upload landscape](#)

### No Landscape Found!

Please upload at least two landscapes. Compare them by clicking their data points in the timeline.

### History

#### Classes

Name	Timestamp	Change
Main\$ApplicationTask	Fri Sep 06 2019 05:52:59 GMT+0200 (Mitteleuropäische Sommerzeit)	DELETED
JavaExample	Fri Sep 06 2019 05:52:59 GMT+0200 (Mitteleuropäische Sommerzeit)	DELETED

## Live Demonstration

- ▶ Goals
  - ▶ evaluate, how functional the tool is
  - ▶ evaluate the usability
- ▶ Questionnaire
  - ▶ Personal Information
  - ▶ Comparison Tasks
  - ▶ Debriefing Questions

- ▶ High correctness of tasks
- ▶ Tasks were seen as easy
- ▶ Tool usage was also seen as easy
- ▶ History feature was perceived as useful
- ▶ Some UI problems discovered

- ▶ Saving merged landscapes and history
- ▶ Landscapes not in timestamp order in timeline
- ▶ Other colors/customization of colors for merged landscapes
