

Supplement of

The control of hydrogen sulfide on benthic iron and cadmium fluxes in the oxygen minimum zone off Peru

6

7 Table S2: Input data from M92 for diffusive flux calculations.

station	Fe(II) concentration in bottom water	Fe(II) concentration in pore water sediment surface	porosity	temperature	pressure	salinity
	(μM)	(μM)		($^{\circ}\text{C}$)	(bar)	
1	0.70	4.83	0.96	13.99	8.1	34.98
3	0.21	0.77	0.98	13.84	13.90	34.98
4	1.15	1.80	0.96	13.77	15.50	34.96
5	0.03	0.31	0.96	13.16	20.50	34.94
6	0.20	2.13	0.96	13.16	25.40	34.94
9	0.03	0.03	0.84	5.17	78.30	34.54
10	0.00	0.06	0.74	4.62	103.4	34.55

8

9 Table S3: Silicic acid (Si(OH)_4) concentrations in the near-bottom water column.

distance from seafloor (m)	Station 1 Si(OH)_4 concentration (μM)	Station 3 Si(OH)_4 concentration (μM)	Station 4 Si(OH)_4 concentration (μM)	Station 5 Si(OH)_4 concentration (μM)	Station 6 Si(OH)_4 concentration (μM)	Station 9 Si(OH)_4 concentration (μM)
0.5	31.28	29.74	24.86	24.32	27.28	-
1	31.63	29.22	24.51	24.20	27.14	56.22
2	-	29.2	23.61	24.35	27.02	56.04
3	31.38	28.66	24.36	-	-	55.96
4	31.27	28.17	24.20	24.00	27.04	55.44

10

11

12

13 Table S4: Equations for linear regressions from benthic chamber incubation data ($Y =$
14 concentration, $X =$ incubation time) and coefficients of determination (R^2).

station	Fe	Fe	Cd	Cd
	linear regression	R^2	linear regression	R^2
1	$Y = 0.88 * X + 186.18$	0.01	$Y = 0.00 * X + 0.068$	0.06
4	$Y = 4.78 * X + 7.07$	0.72	$Y = -0.01 * X + 0.55$	0.96
5	$Y = -0.89 * X + 89.28$	0.1	$Y = -0.01 * X + 0.53$	0.89
6	$Y = 2.32 * X + 57.34$	0.47	$Y = -0.01 * X + 0.58$	0.87
9	$Y = 2.95 * X + 76.38$	0.49	$Y = 0.00 * X + 1.01$	0.36
10	$Y = 0.67 * X + 28.20$	0.12	$Y = 0.00 * X + 0.99$	0.07

19 **Figure captions**

20

21 Fig. S1: Close up of pore water dissolved Fe(II) and hydrogen sulfide concentrations
22 in the first 5 cm of the surface sediment. Data from an earlier cruise, M92, at Station
23 1 (75 m water depth) are displayed for comparison. The uppermost sample
24 represents the bottom water concentration. The analytical error is smaller than the
25 symbol size.

26

27 Fig. S2: Close up of pore water dissolved Cd and hydrogen sulfide concentrations in
28 the first 5 cm of the surface sediment. The uppermost sample represents the bottom
29 water concentrations. The analytical error is smaller than the symbol size.
